## LAB REPORT on

### OBJECT ORIENTED MODELLING AND DESIGN

*Submitted by*

**DEEPTHI L (1BM19CS226)**

*in partial fulfilment for the award of the degree of*

**BACHELOR OF ENGINEERING**

*in*

**COMPUTER SCIENCE AND ENGINEERING**

**B.M.S. COLLEGE OF ENGINEERING BENGALURU-560019 May-2022 to  
July-2022**

(Autonomous Institution under VTU)

**B. M. S. College of Engineering,**

**Bull Temple Road, Bangalore 560019**

(Affiliated To Visvesvaraya Technological University, Belgaum)

## **Department of Computer Science and Engineering**

### **CERTIFICATE**

This is to certify that the Lab work entitled “LAB COURSE **Object oriented modelling & design**” carried out by **DEEPTHI L (1BM19CS226)**, who is bonafide student of **B. M. S. College of Engineering**. It is in partial fulfilment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of Object oriented modelling and design – **(20CS6PCOMD)** work prescribed for the said degree.

**Dr. Shyamala G**  
Assistant Professor  
Department of CSE  
BMSCE, Bengaluru

**Dr. Jyothi S Nayak**  
Professor and Head  
Department of CSE  
BMSCE, Bengaluru

## Index Sheet

Sl. No.	Experiment Title	Page No.
1	<b>COLLEGE INFORMATION SYSTEM</b>	<b>4-9</b>
2	<b>HOSTEL MANAGEMENT SYSTEM</b>	<b>10-15</b>
3	<b>STOCK MANAGEMENT SYSTEM</b>	<b>16-20</b>

7	<b>GRAPHICS EDITOR SYSTEM</b>	<b>40-45</b>

## **Course Outcome**

At the end of the course the student will be able to

**CO1** Ability to apply the knowledge of class, State & Interaction Modelling using Unified Modeling Language to solve a given problem.

**CO2** Ability to analyze a System for a given requirement using Unified Modeling language.

**CO3** Ability to design a given system using high level strategy.

**CO4** Ability to conduct practical experiment to solve a given problem using Unified Modeling language

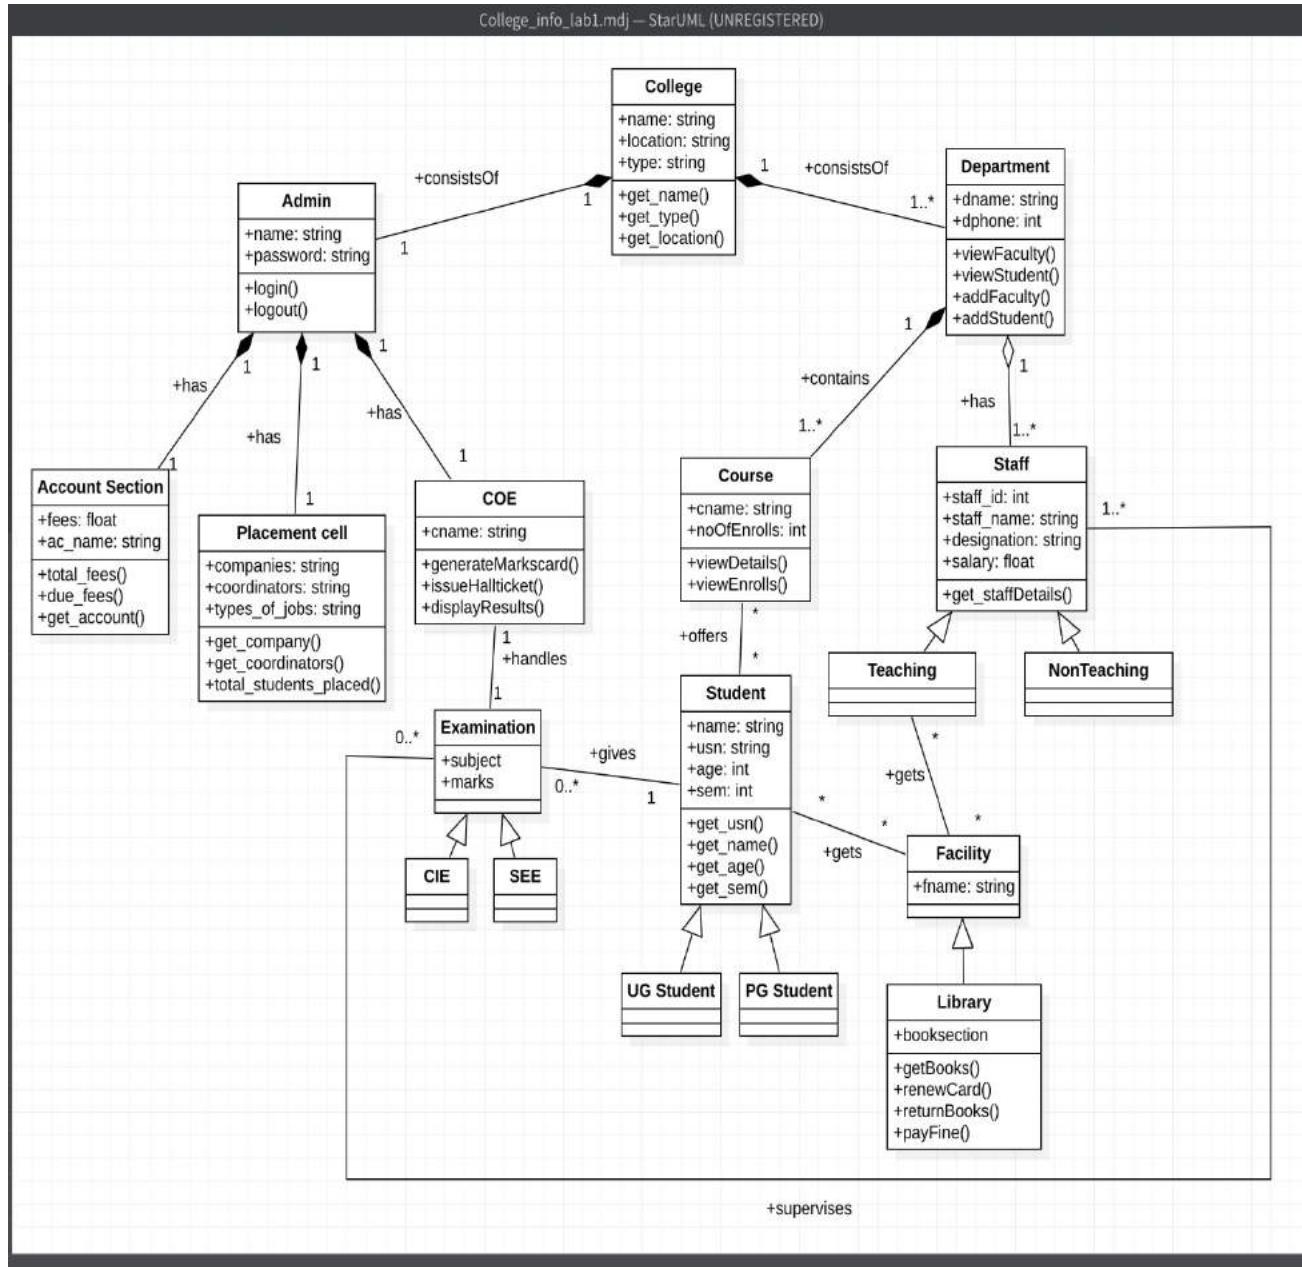

# **1. COLLEGE INFORMATION SYSTEM**

## **SRS**

A centralized approach and system for managing, storing, accessing and updating all the information and details present in relevance to students, and teaching and non-teaching faculty, increasing efficiency and convenience of information management in educational institutions.

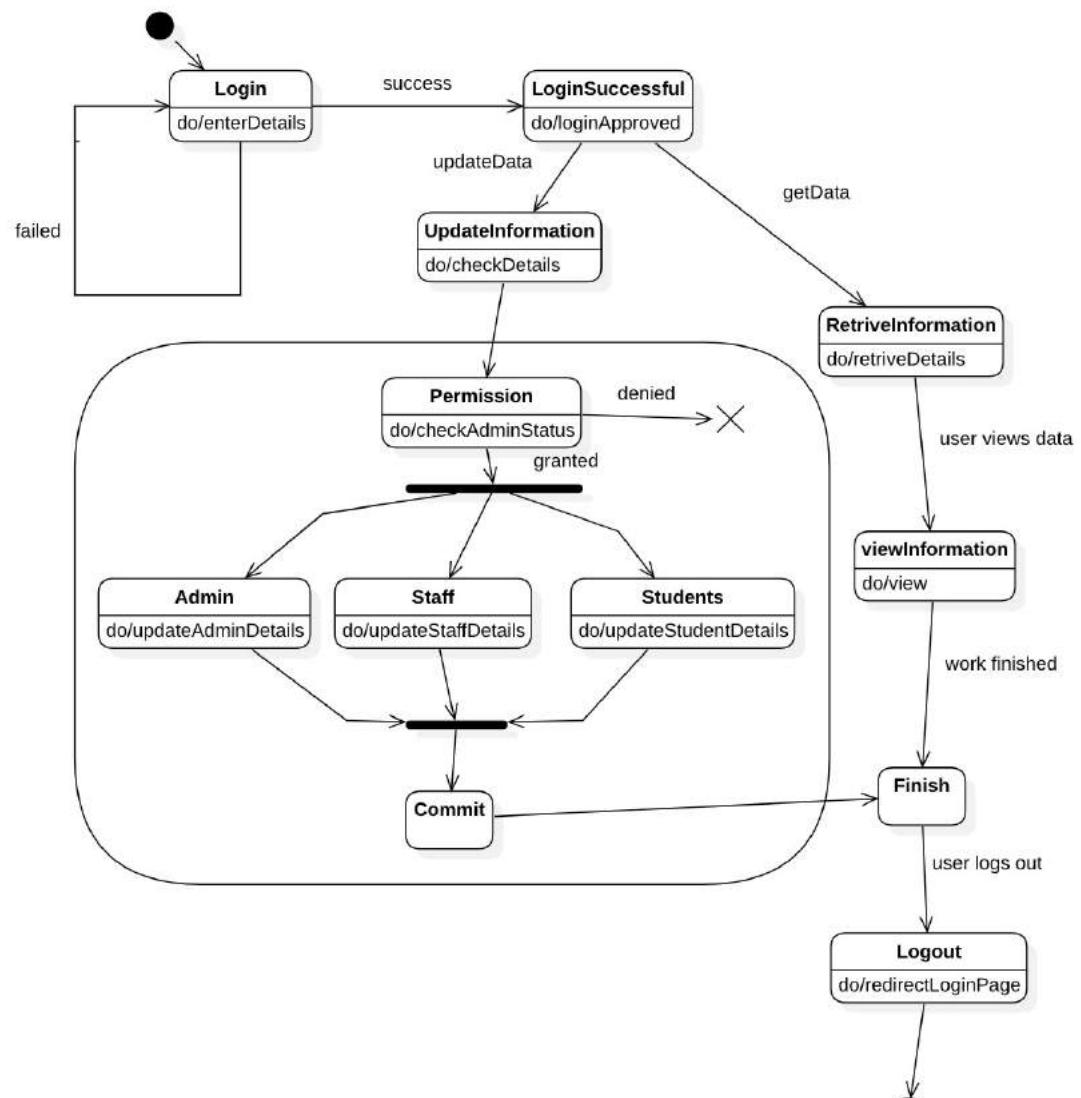

- Educational institutions should be able to add, edit and view student personal details, like name, age, gender, email, phone number, address and so on.
- Educational institutions should be able to add, edit and view student academic details, like USN, department, semester and registered courses.
- Faculty should be able to view all student personal details, and should be able to view and edit internal evaluation marks and attendance of students.
- The COE office should be able to view all student details, and view and edit internal and examination marks, and publish results.
- Placement section should be able to view all student details, and add companies coming to the campus for placements.
- Management section should be able to view, add and edit teaching and non-teaching staff details.
- Students should not be allowed to edit their personal or academic details.
- The system should be convenient and easy to use by students, management and faculty.
- The system should be a reliable source of information viewing (most importantly, academic grades) for students, COE and faculty

## **2. HOSTEL MANAGEMENT SYSTEM**

### **SRS**

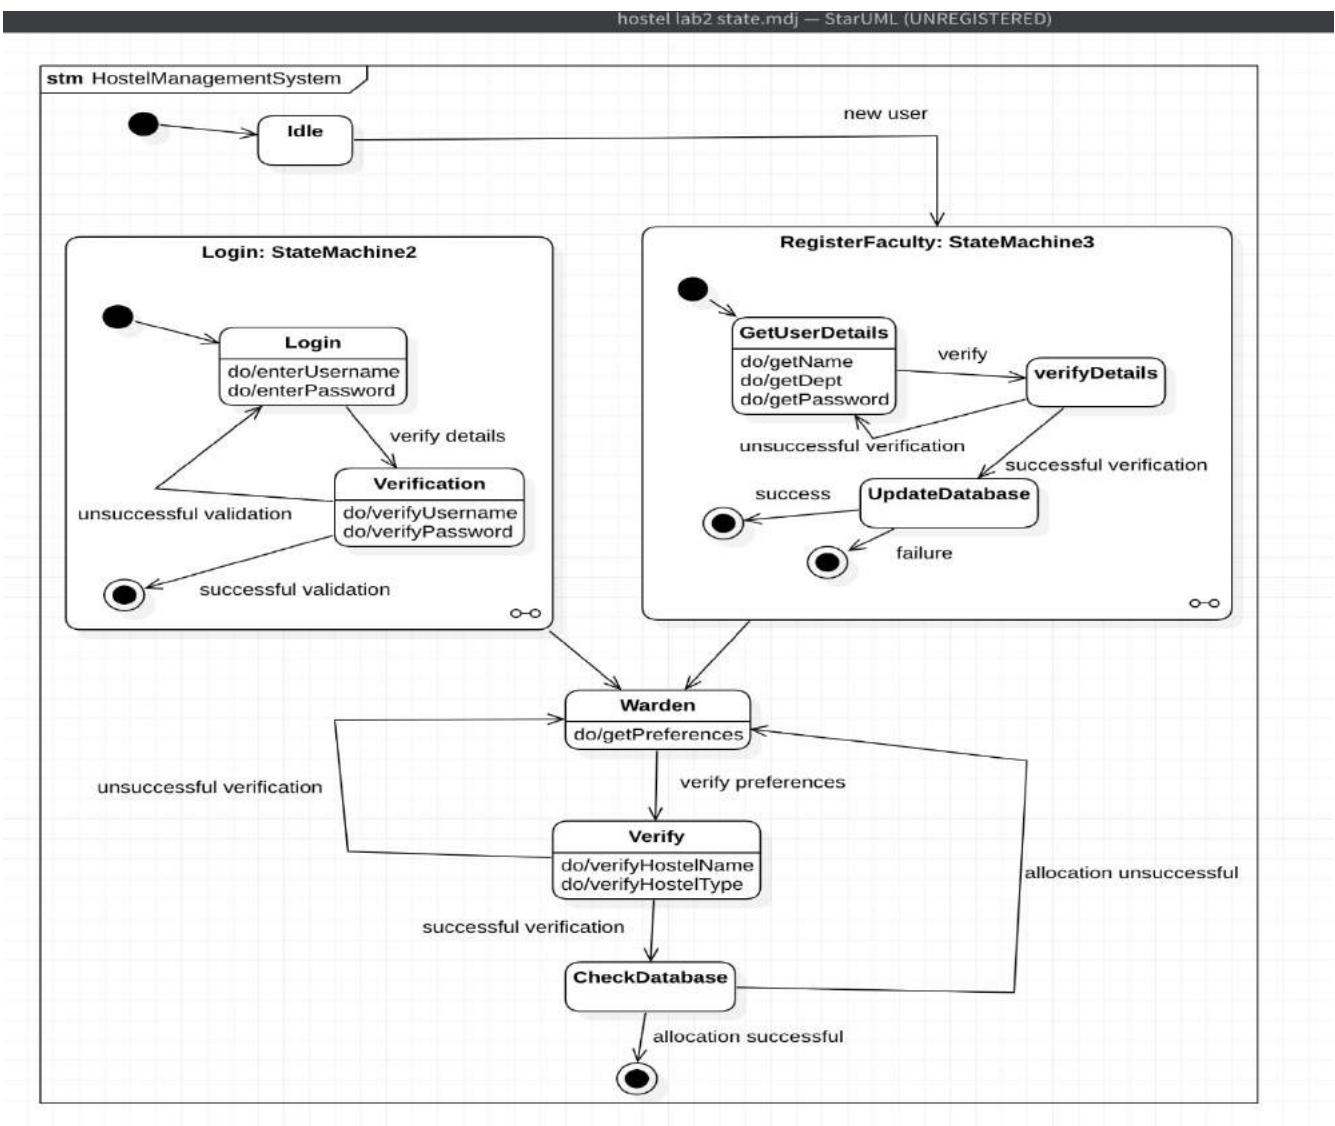

The purpose of Hostel Management System is to carry out different operations of a hostel. This system will provide ease, comfort of use to the staff of the hostel by performing all work on computer. It helps to manage student and staff records.

- Admin can login using credentials provided to him.
- Admin can allot room to students.
- Students can login using the credential provided and can give feedback about staff.
- Admin can review the feedback provided by students.
- Admin can appoint staff.
- Students can provide mess feedback.
- Mess managers can review the mess feedback.
- Mess manager can update the menu list.
- Admin can assign work to staff members.
- The system should be easy to handle.
- System should give expected performance results.
- The response time should be small.

## ADVANCED ACTIVITY DIAGRAM

### **3 STOCK MANAGEMENT SYSTEM**

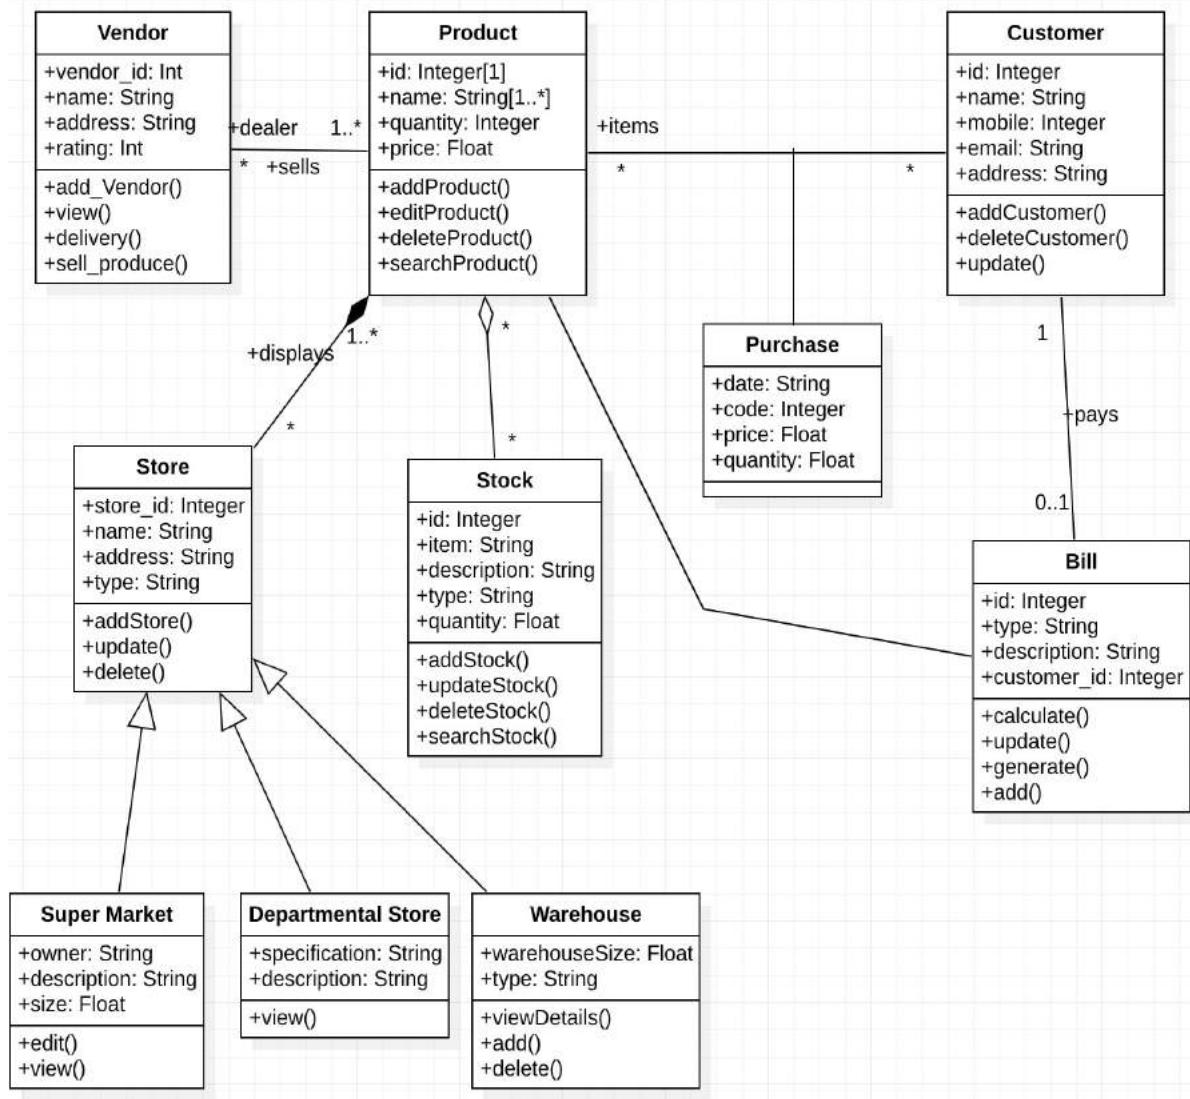

#### **SRS**

The stock maintenance system will allow the employees to record information of the items available in the store and generate reports based on the total amount of sales. The new system will have a windows-based desktop interface to allow employees to enter the information of sales, purchase orders, change employee preferences and create reports. The system retains information on all the items in the shop. The system retains the records of the cost, expiry date, vendor details, Discount, quantity. The employee maintains the information of the sale of the item. He can add the items at the right time and update the database. The customer can view the availability of the required items and the price of the items. The customer can just view them but cannot make any changes

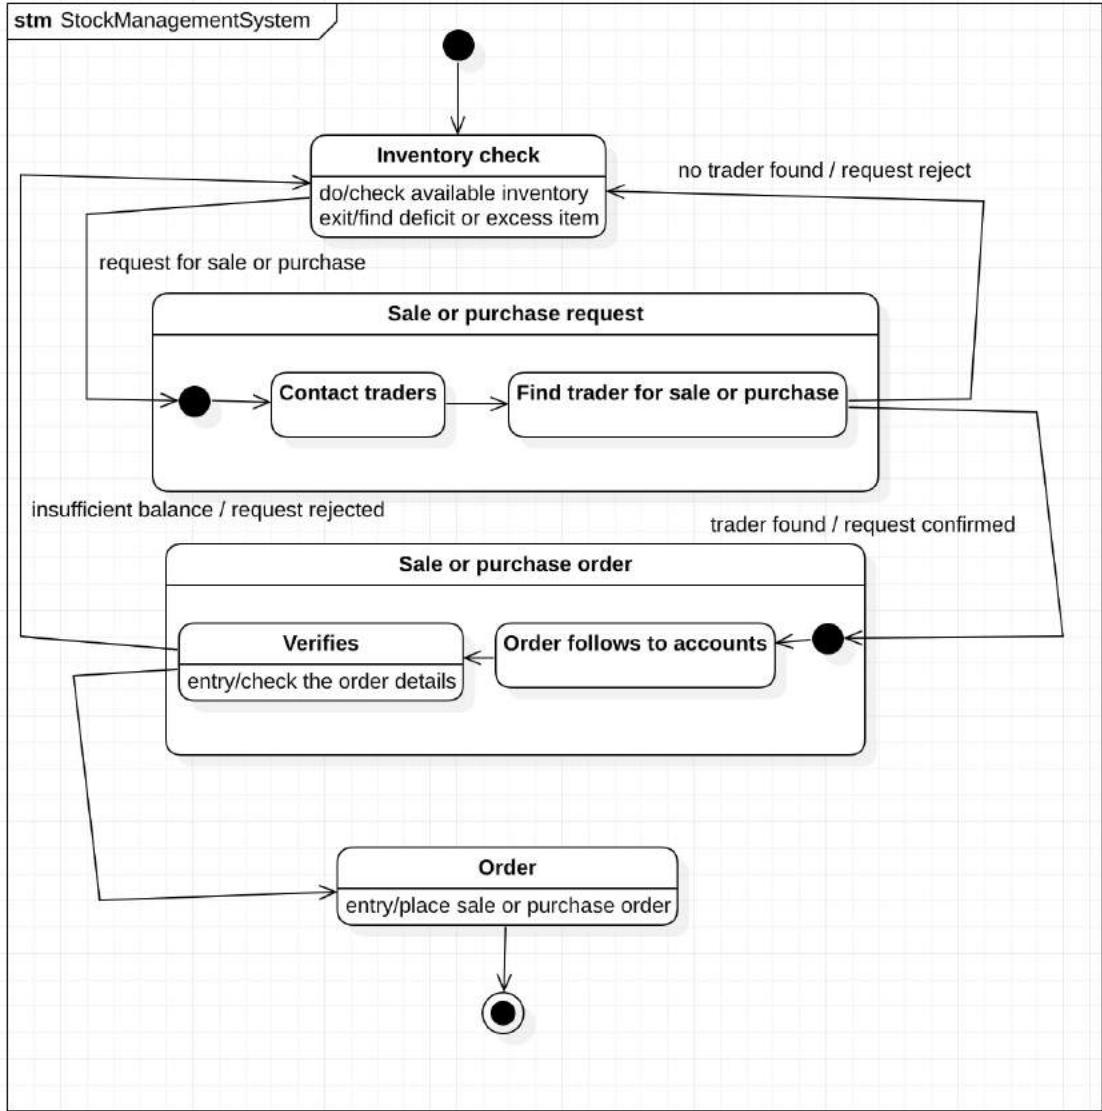

The process of stock maintenance system is that the customer logs in to the particular site to place the order for the customer product. The stock maintenance system is described sequentially through steps

- The customer logs in to the particular site.
- They fill the customer details.
- They place the orders for their product.
- The vendor logs in and views the customer details and orders

## **4.COFFEE VENDING SYSTEM**

### **SRS**

The Objective of the system is to prepare a coffee vending machine for commercial purpose. The system will be able to prepare coffee by processing all its required ingredients. Users will be provided with sophisticated and easy to use user interfaces.

There are many different types of coffee makers using a number of different brewing principles, in the most common devices, coffee grounds are placed in a paper or metal filter inside a funnel, which is set over a glass or ceramic coffee pot, a cooking pot in the kettle family. Cold water is poured into a separate chamber, which is then heated up to the boiling point, and directed into the funnel.

- Cash Box:Knows amount of money put in; Give change; Knows price of coffee; Turns front panel on and off.
- Front panel:Captures selection; Knows what to mix in each; Instructs mixer when to mix.
- Mixer:Knows how to talk to the dispensers.
- Dispenser [cup-, coffee powder-, sugar-, creamer-, water-]:Knows how to dispense a fixed amount, knows when it is empty.

Features :

- Small carbon footprint
- Energy saving advanced power management system
- Comprehensive drink range
- Simple user interface
- One touch servicing

Working : Coffee vending machines are quite simple and basic. The way they work is not too different to how a tabletop coffee machine or even a drip coffee machine operates. If you think about it, making coffee is simply adding together coffee beans or grounds to hot water and mixing with milk and sugar, that's exactly what a hot drink vending machine does.

Functions :

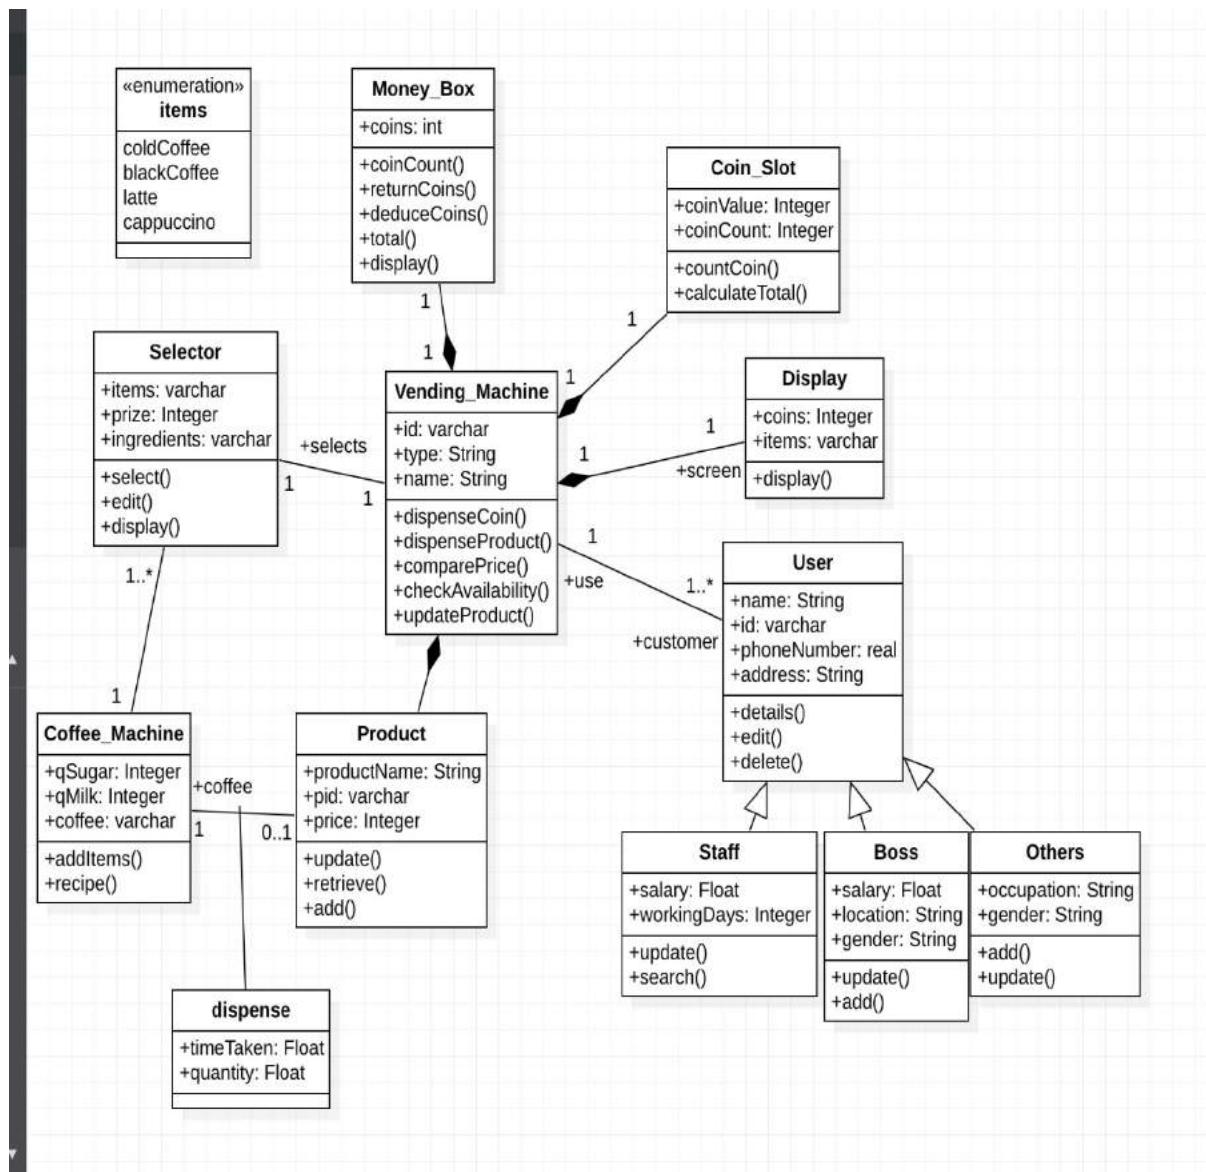

- Add heat:to heat the coffee we have 3 options. We could use a heating element where the water gravity fed into a tubular heating element, external to the water reservoir, and boiled out. Secondly, we could use a submersible heating element placed inside of the water reservoir to heat all of the water at once. Thirdly, we could use an external hot plate to heat one or multiple walls of the water reservoir and thus heat the water through surface convection.
- Direct Water:The fluids could be directed from the water reservoir to their final destination via tubing, gravity reed, and pump.

- Contain Water/Coffee: To contain the water and coffee we could use one reservoir, two reservoirs or a funnel. If one reservoir was used for both the water and coffee container, our design would be a percolating or French press coffeemaker.
- Reduce Noise: To reduce the overall noise we consider two options: noise dampening material and internal brew mechanism. To lessen the noise produced by our designs we could fill or cover the outer shell of a noise dampening material. We could also keep the brew mechanism, whether it is drip spout.

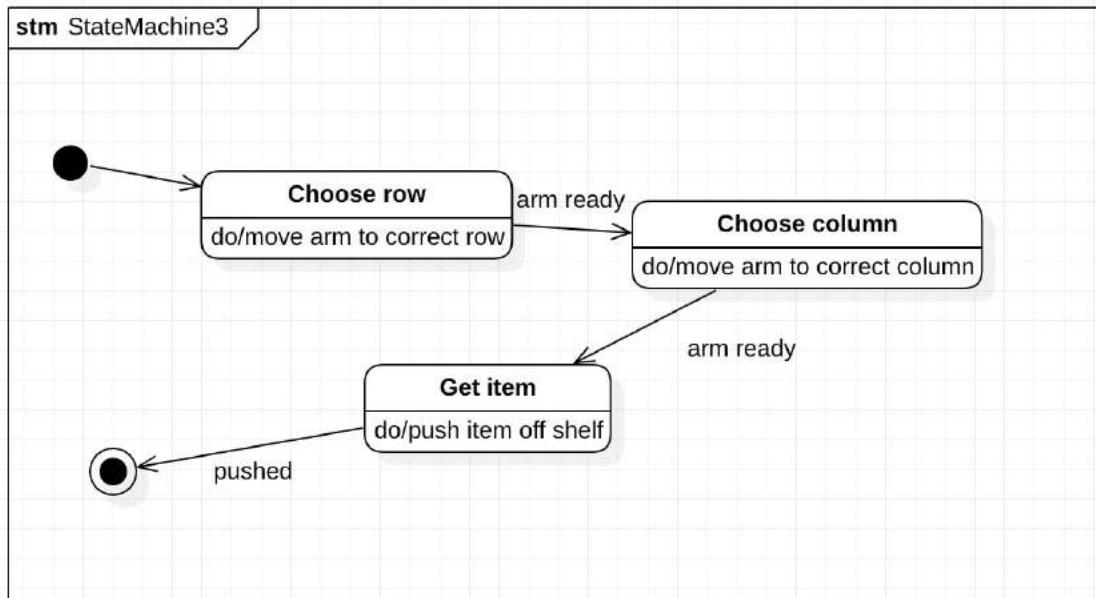

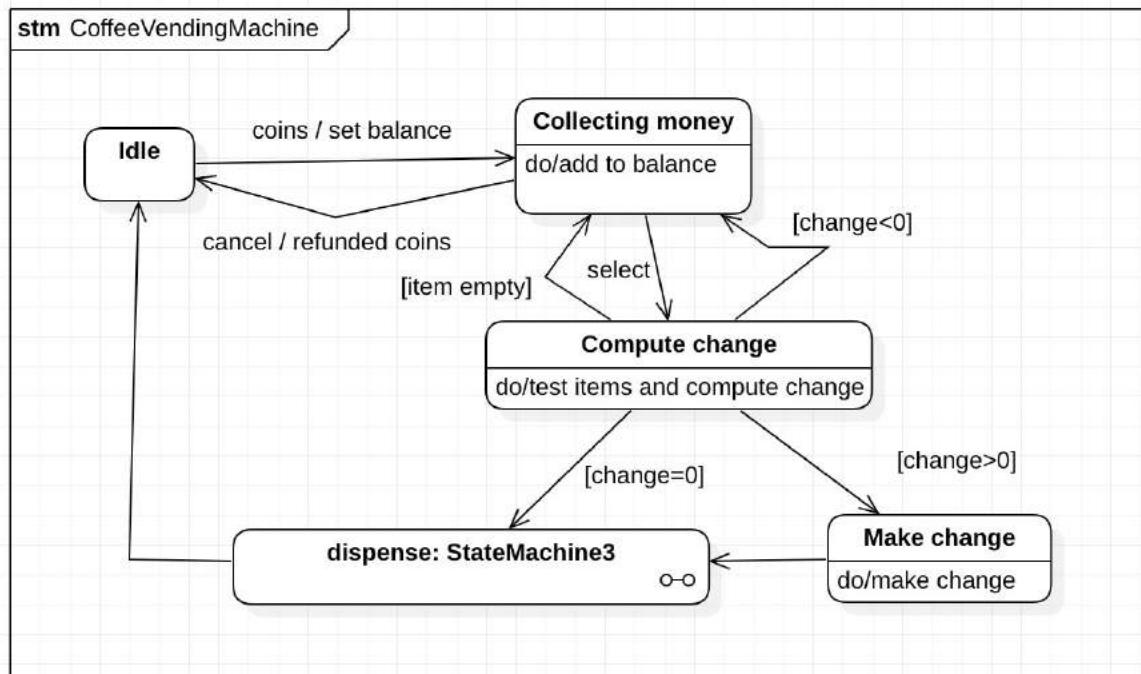

#### Maintenance:

When it comes to the ways in which coffee vending machines work, it's not all about the coffee, it's also about the upkeep and maintenance of the machine. With regular visits, suppliers should empty the cash drawer, reconcile the proceeds against sales, empty the waste grounds, refill ingredients and cups, and generally undertake any work to both the interior and exterior to keep everything running smoothly, such as ensuring there's no build up of dirt around the exterior buttons that could cause them to stick, and making sure nothing is blocking the internal sensors that could prevent some ingredients from being added to the mixing chamber.

## **5.ONLINE SHOPPING SYSTEM**

### **SRS**

The online shopping system allows the users and vendors to exchange products remotely and reduces the amount of cost and time substantially.

The software provides the following facilities to the customers:

- Facilitates easy shopping online anywhere with free shipping (conditions apply).
- Provides information about the products in categories
- Can avail the facility of purchasing second hand products
- Can reserve if the particular product is not available
- Customers are provided with up to date information on the products available
- Provides email facility for future correspondence
- Provides backup facility
- Can add nearly ten products to their shopping cart at a time

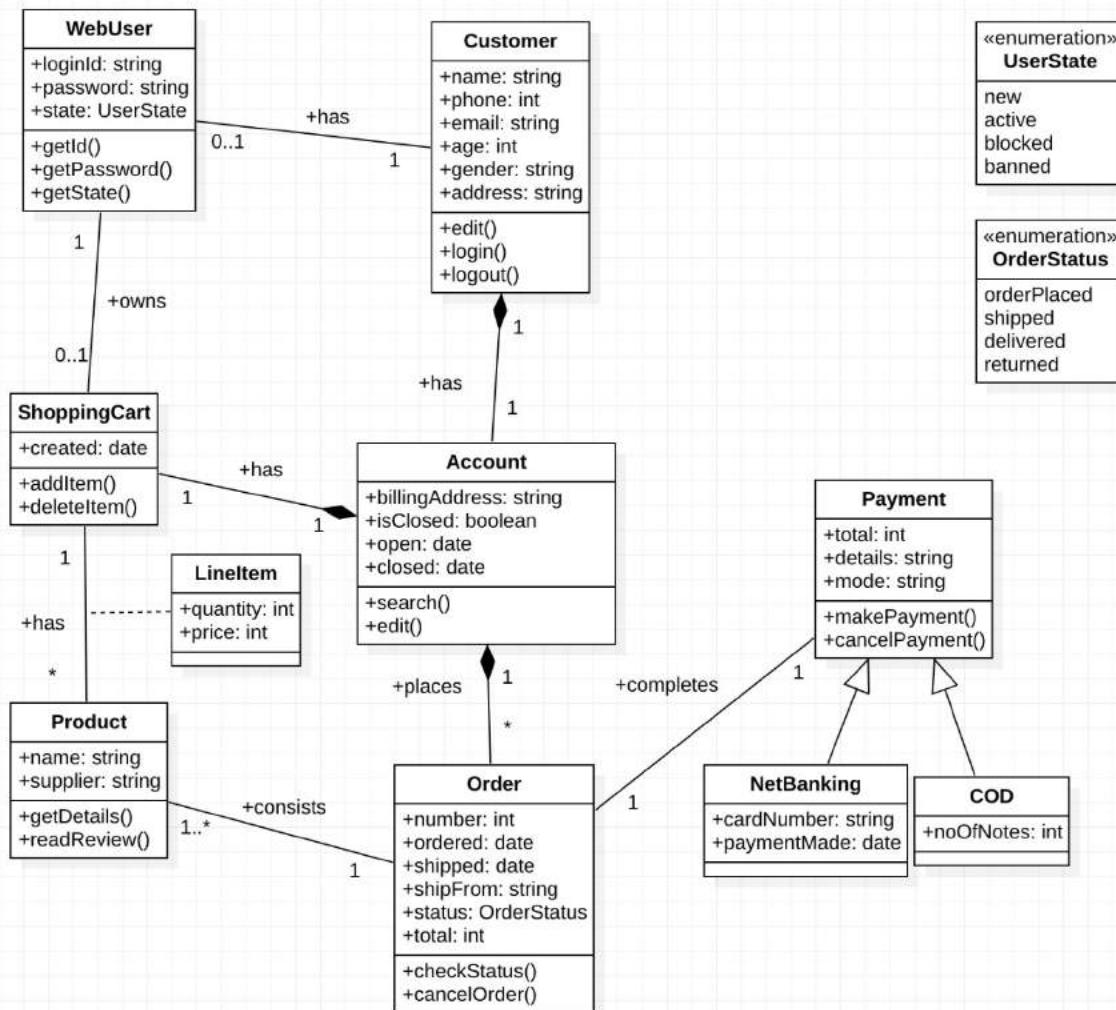

The software will not provide the following facilities to the customers:

- Cannot reserve the product for more than two days.
- Cannot reserve more than two products
- Responsibility of damages
- The product cannot be changeable once confirmed

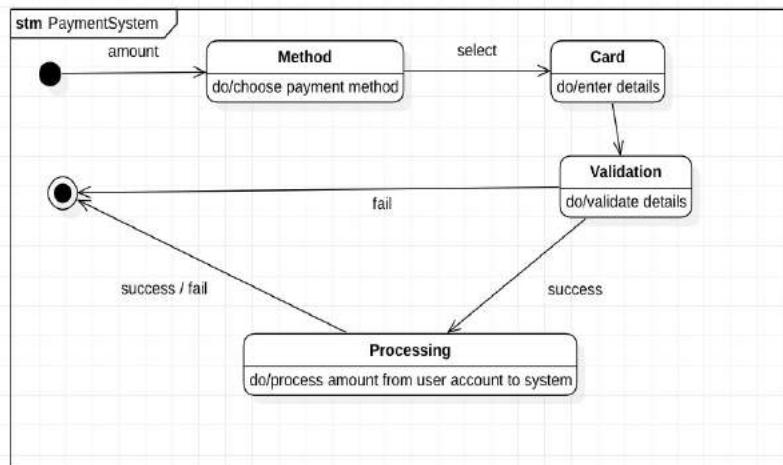

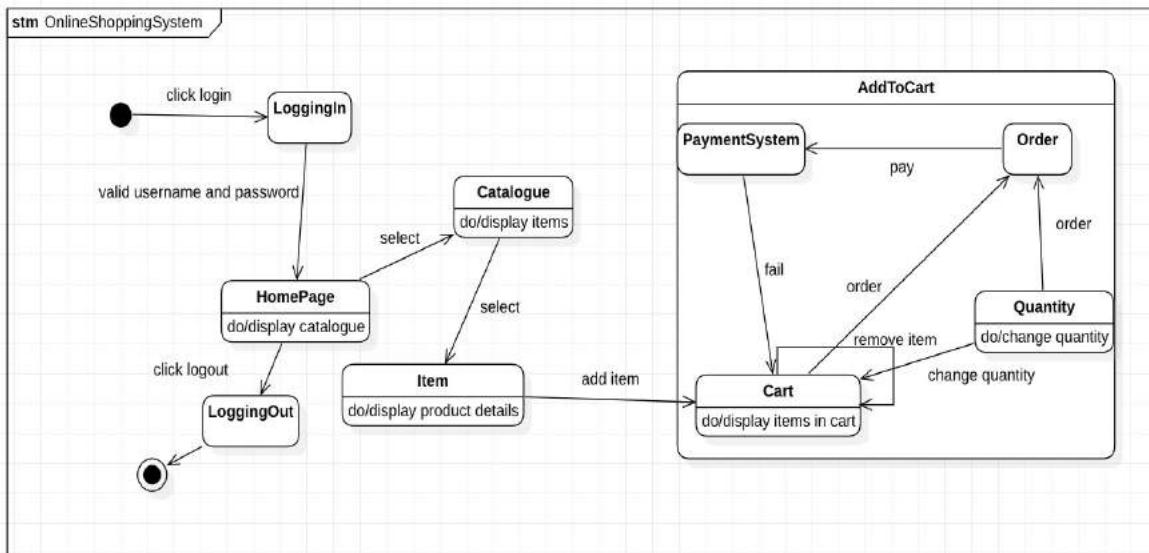

The software provides the following facilities to the merchants:

- Facilitates easy bidding facility
- Provides complete information about the customers
- Provides complete information about their products
- Can avail the facility of email correspondence
- Can avail the brand catalog facility

## **6.RAILWAY RESERVATION SYSTEM**

### **SRS**

To develop a user-friendly Railway Reservation System to enable passengers to book tickets online and make payment online as well.

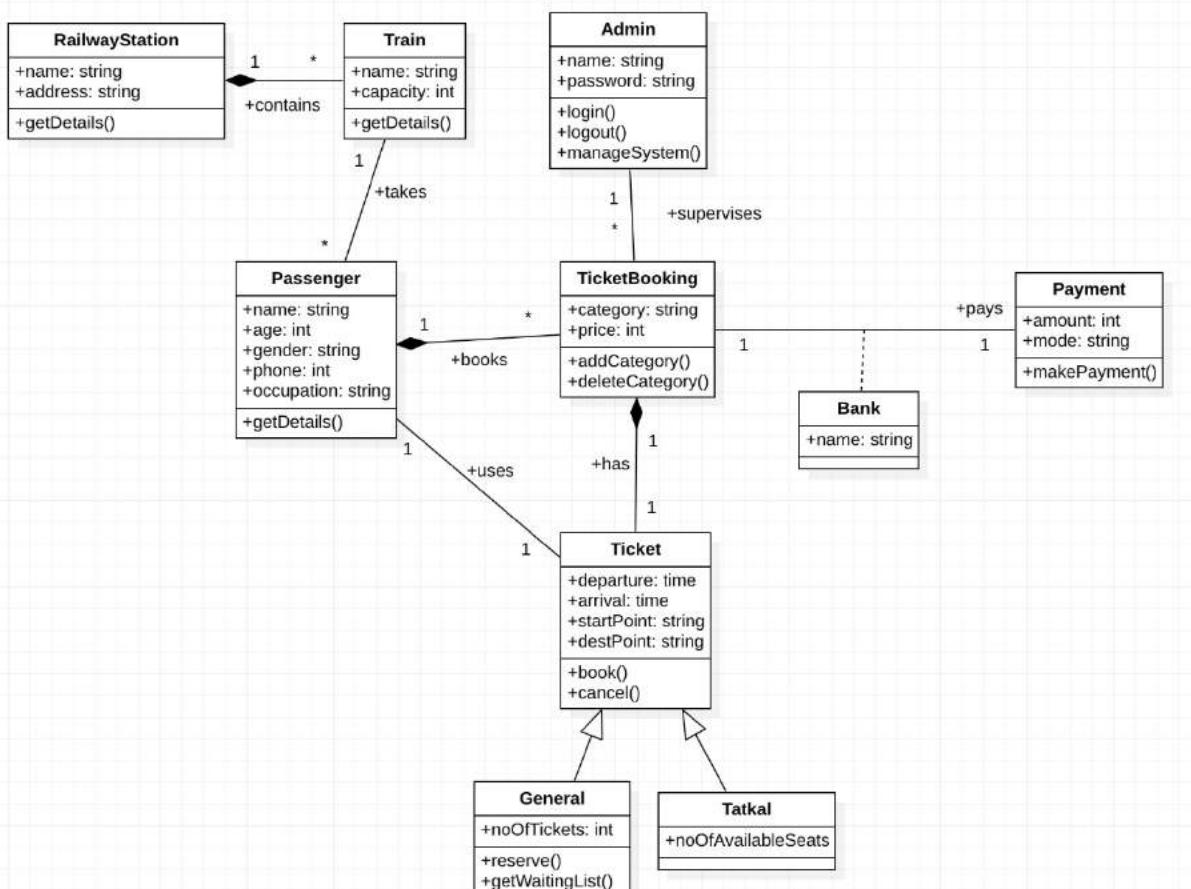

Railway reservation system project which provides the train timing details, reservation, billing and cancellation on various types of reservation namely,

- Confirm Reservation for Seat.
- Reservation against Cancellation.
- Waiting list Reservation.
- Online Reservation.
- Tatkal Reservation

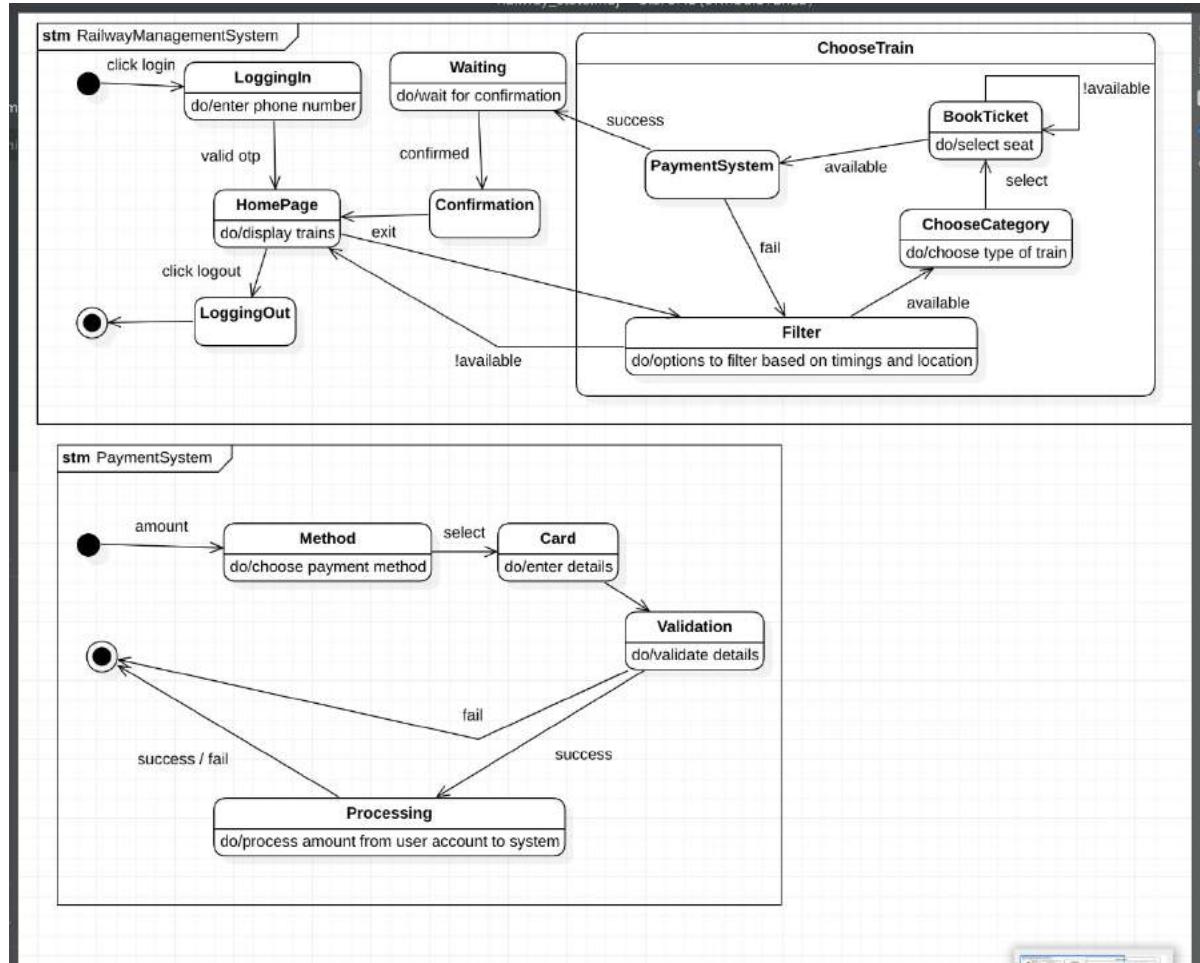

This system enables the Advance booking in any class, against general and ladies quota, on payment of fare in full for adults and children, a maximum of six berths/seats at a time, for journey between any two stations served by a train.

It also provides details about

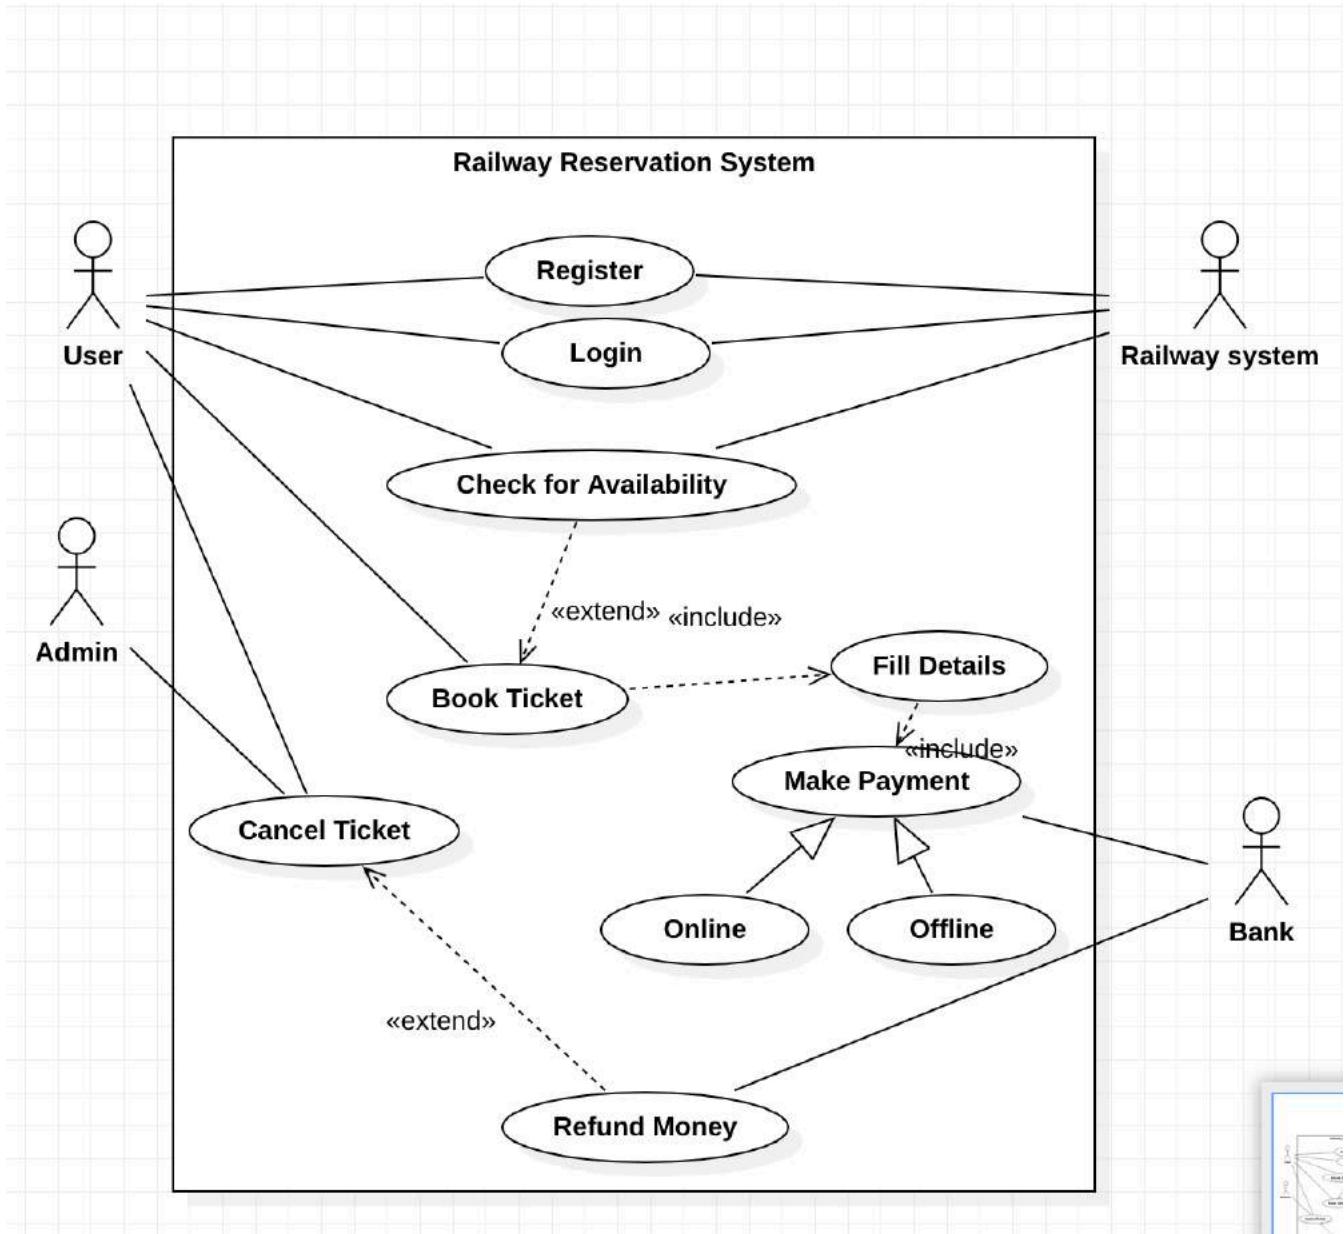

1. Timetable
2. Train Fares
3. Current status of reservation position
4. Train available between a pair of stations
5. Accommodation available for a train/date combination Types of tickets:  
General and Tatkaal

## **7.GRAPHICS EDITOR SYSTEM**

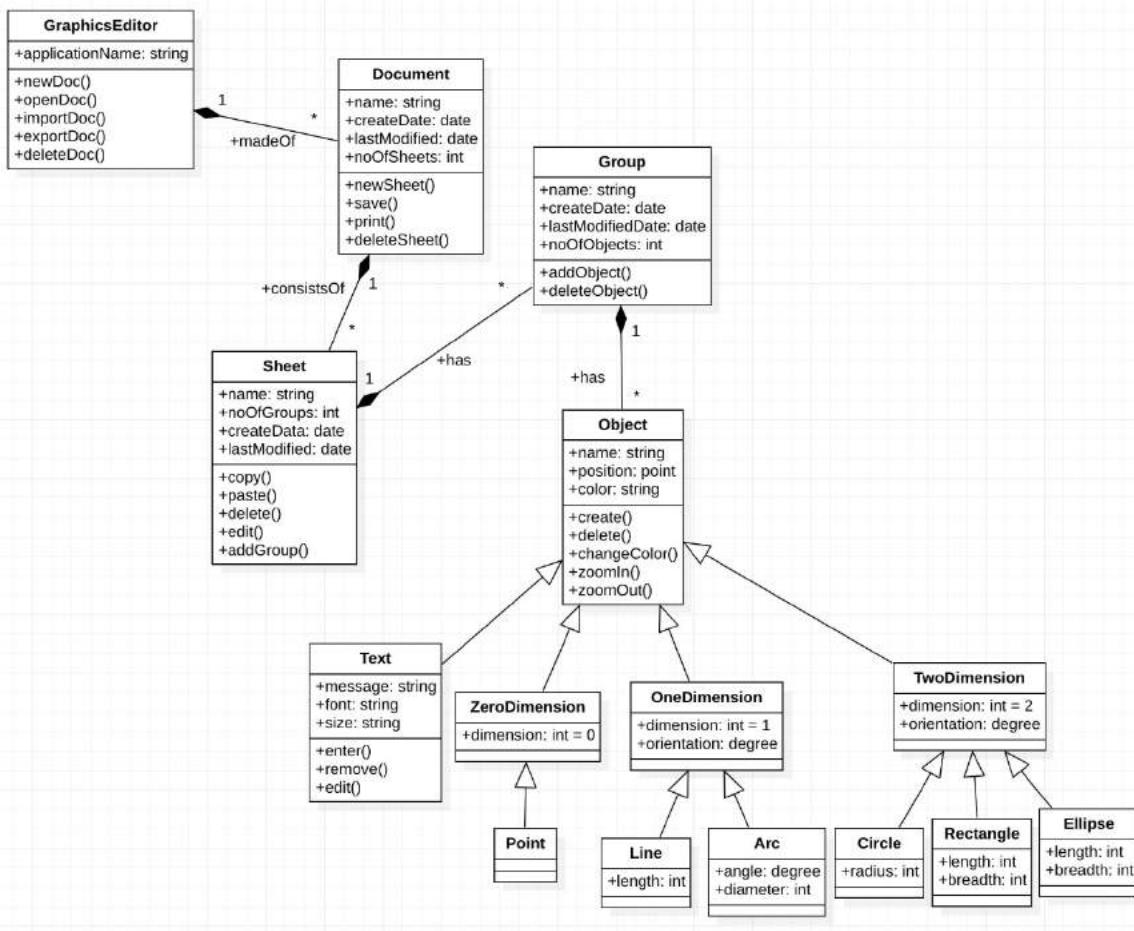

### **SRS**

The graphics editor provides an Application Programmer's Interface that enables a programmer to develop their own graphical model editor for a specific type of model. This API in turn, relies on extending the Eclipse Graphical Editing Framework to provide an environment in which the editor functions, and the programmer can create a graphical editor and palette of shapes in order to modify an underlying model. The graphical editor provides an interface with which the programmer implements said editor for a given underlying model. Such an instance of the graphical editor allows a user to drag objects from a specified model into a working graphical diagram.

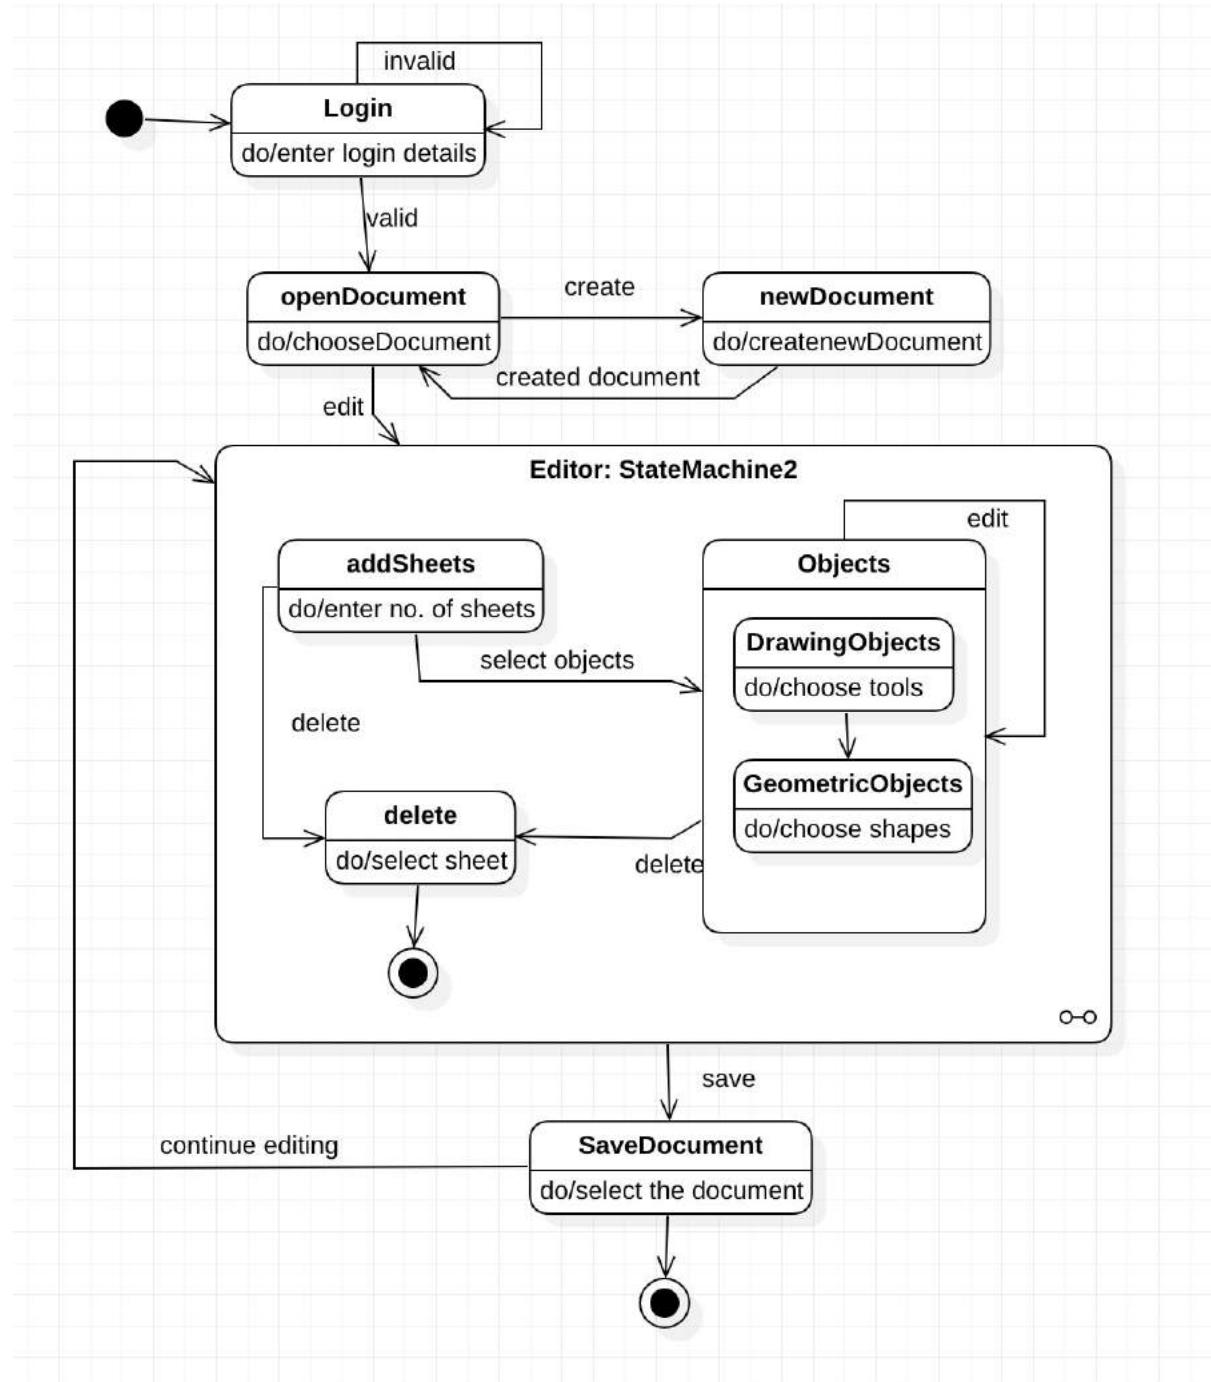

It should support following functionalities:

- It contains the toolbox which contains tools like: Line, Circle, Rectangle, Arc, Text, Draw, Eraser
- Color box or palette
- Standard toolbar with options for New, Open, Save, toolbox and Text Toolbox.
- One integrated view to users for toolbar, color box, menu, and graphic screen.
- Easy handling of tools for users.
- Ability to group several drawings into one i.e. complex drawing.
- Provision of zoom in and zoom out.
- Different shadings of line tool are provided

## 1. College Information System

### Problem statement:

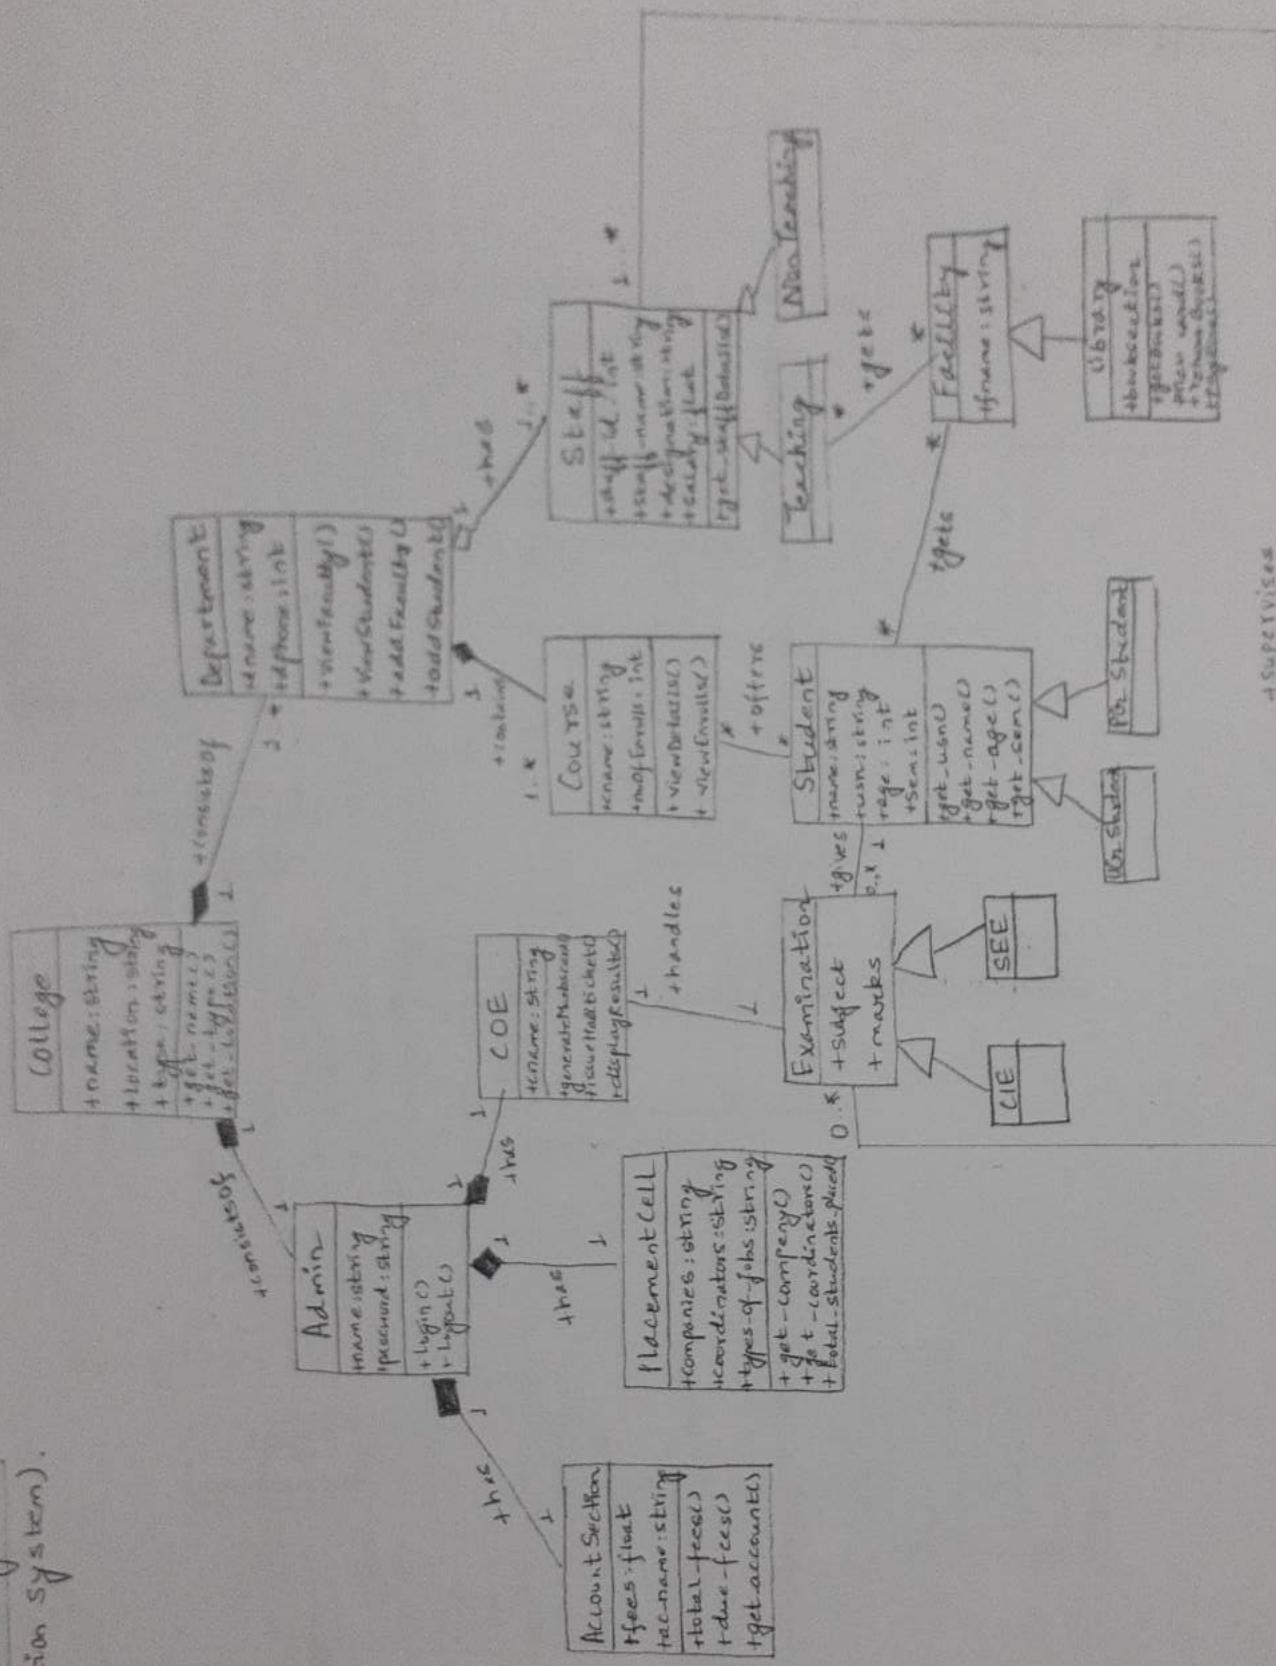

To develop a software so that all the stakeholders such as the students, alumni, faculty can access the college software without the mediation of a college staff such as the faculty, teaching and non-teaching faculty and the management.

### Software Requirements Specification (SRS):

A centralized approach and system for managing, storing, accessing and updating all the information and details present in relevance to students, teaching and non-teaching faculty, increasing efficiency and convenience of information management in educational institutions.

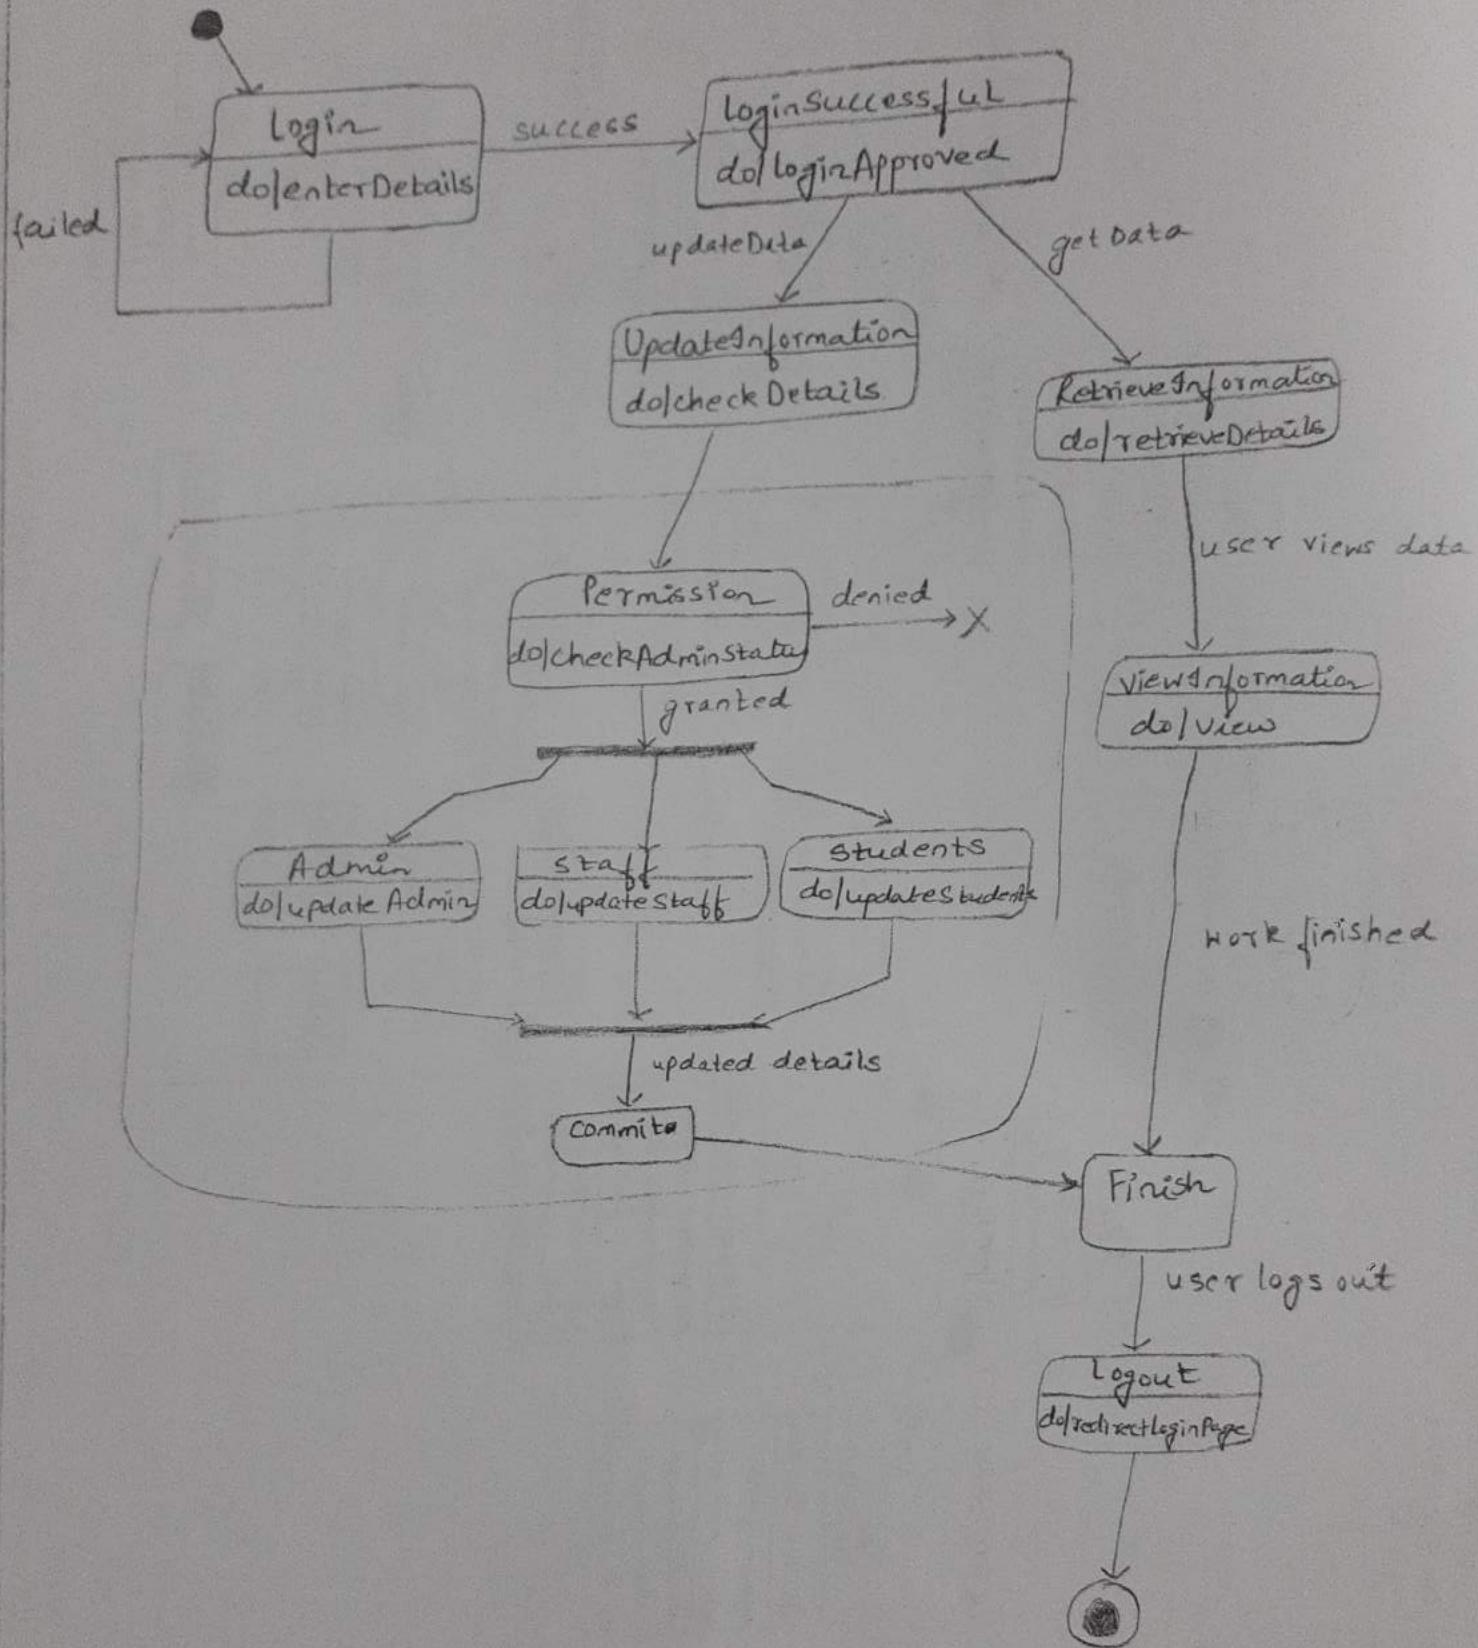

- College Information System has an admin who manages the staff, students and departments.
- The system admin can view and modify student's details like profile, fees, attendance, results. Admin can also modify details of teachers and other non-teaching staff in college.
- User authentication will be done by login using username and password which is classified by user type.
- Faculties in college teach more than one course to many students and conduct examinations for students.
- Students of the college register themselves in the department of their choice and the courses they are interested in and take admission following all the admission procedures.
- Placement cell handles the placements of the college, contacts companies, sends out forms for students to register and get placements.
- The system also has a library that allows students and faculties to issue books, read newspapers and articles.
- There are different types of examination conducted by the college for the students. Internals and Semester-End Examinations are two of them.

## 2. Hostel Management System

### Problem Statement:

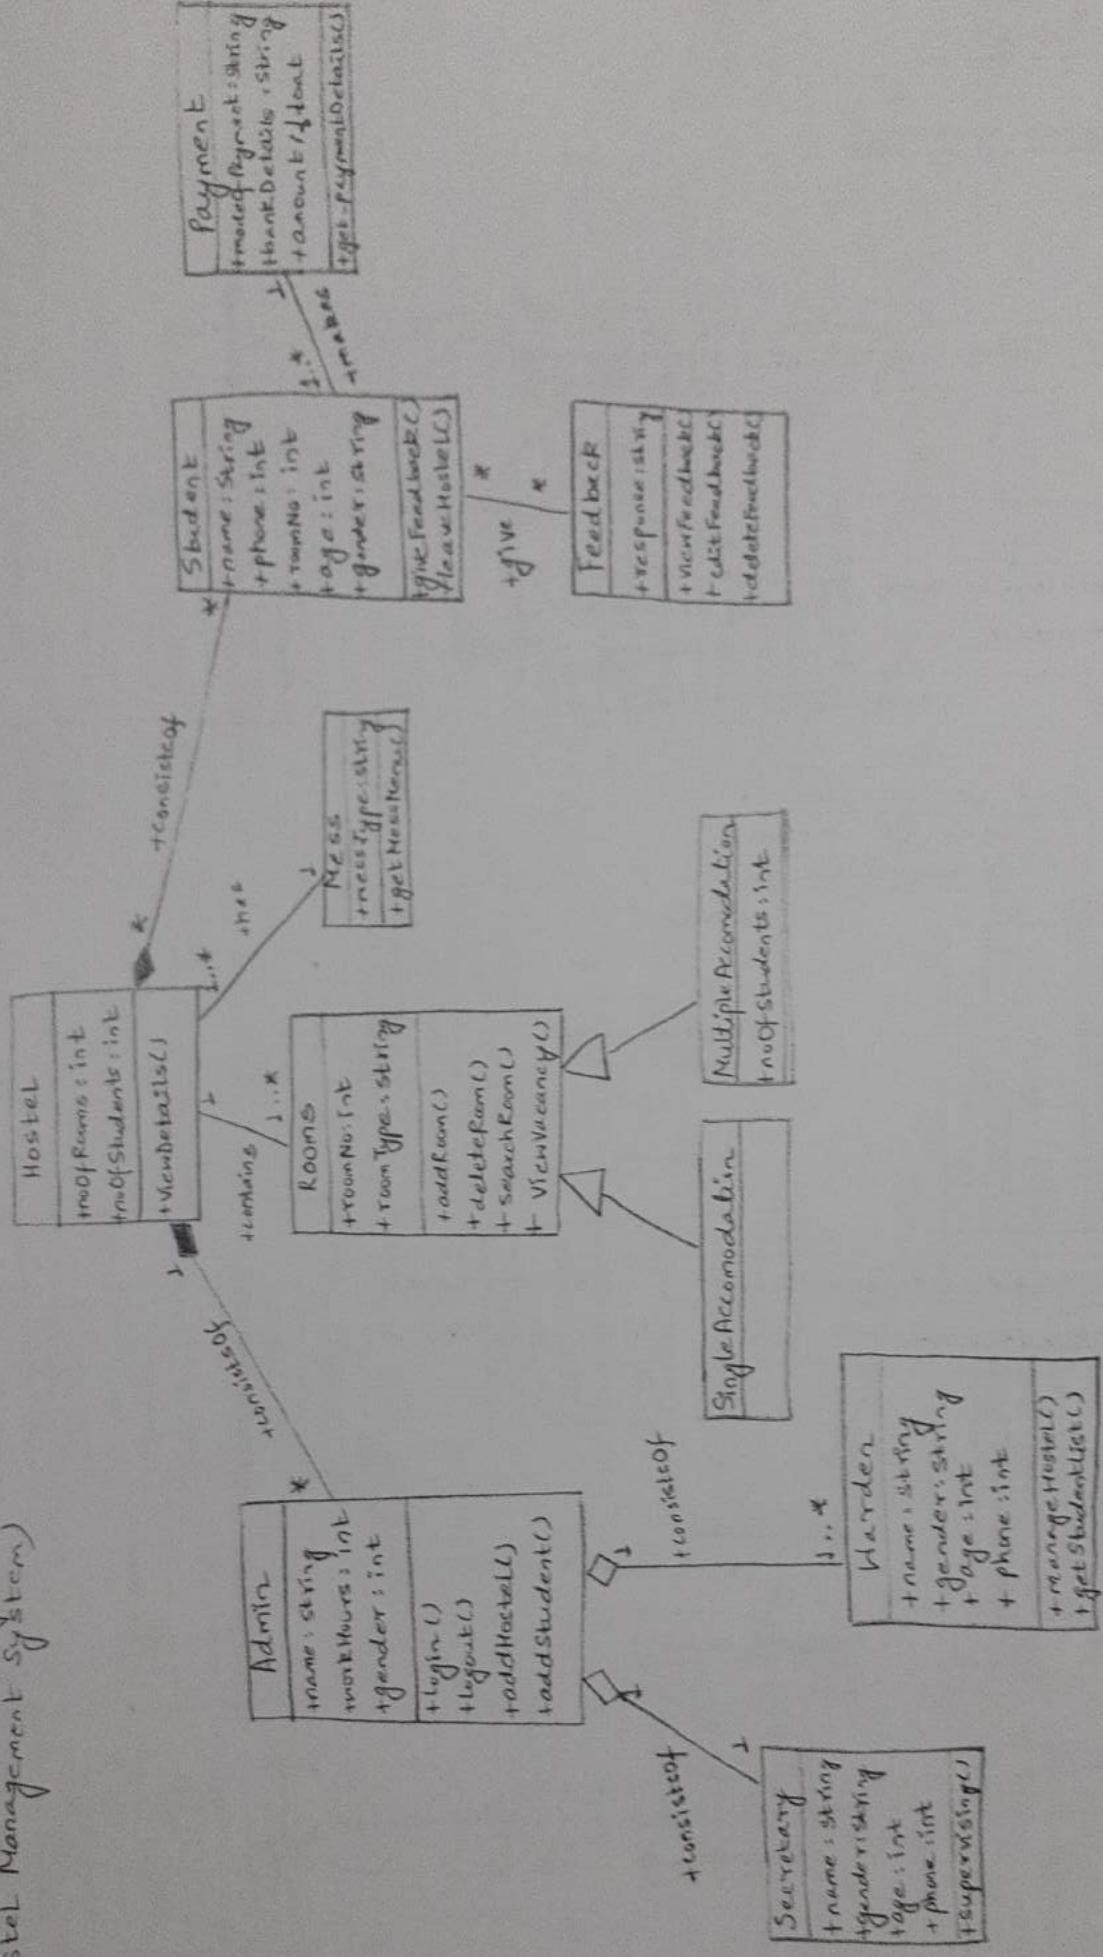

To develop a software which can provide a complete facility that is needed by the hostel managerial team as well as the students. It is quite difficult to manage all the hostel activities manually without having a backup like a database which contains all the information related to each student who is staying in the hostel.

### Software Requirements Specification (SRS):

The purpose of the Hostel Management System is to carry out different operations of a hostel. This system will provide ease of use to the staff of the hostel by performing all work on computers. It helps to manage student and staff records.

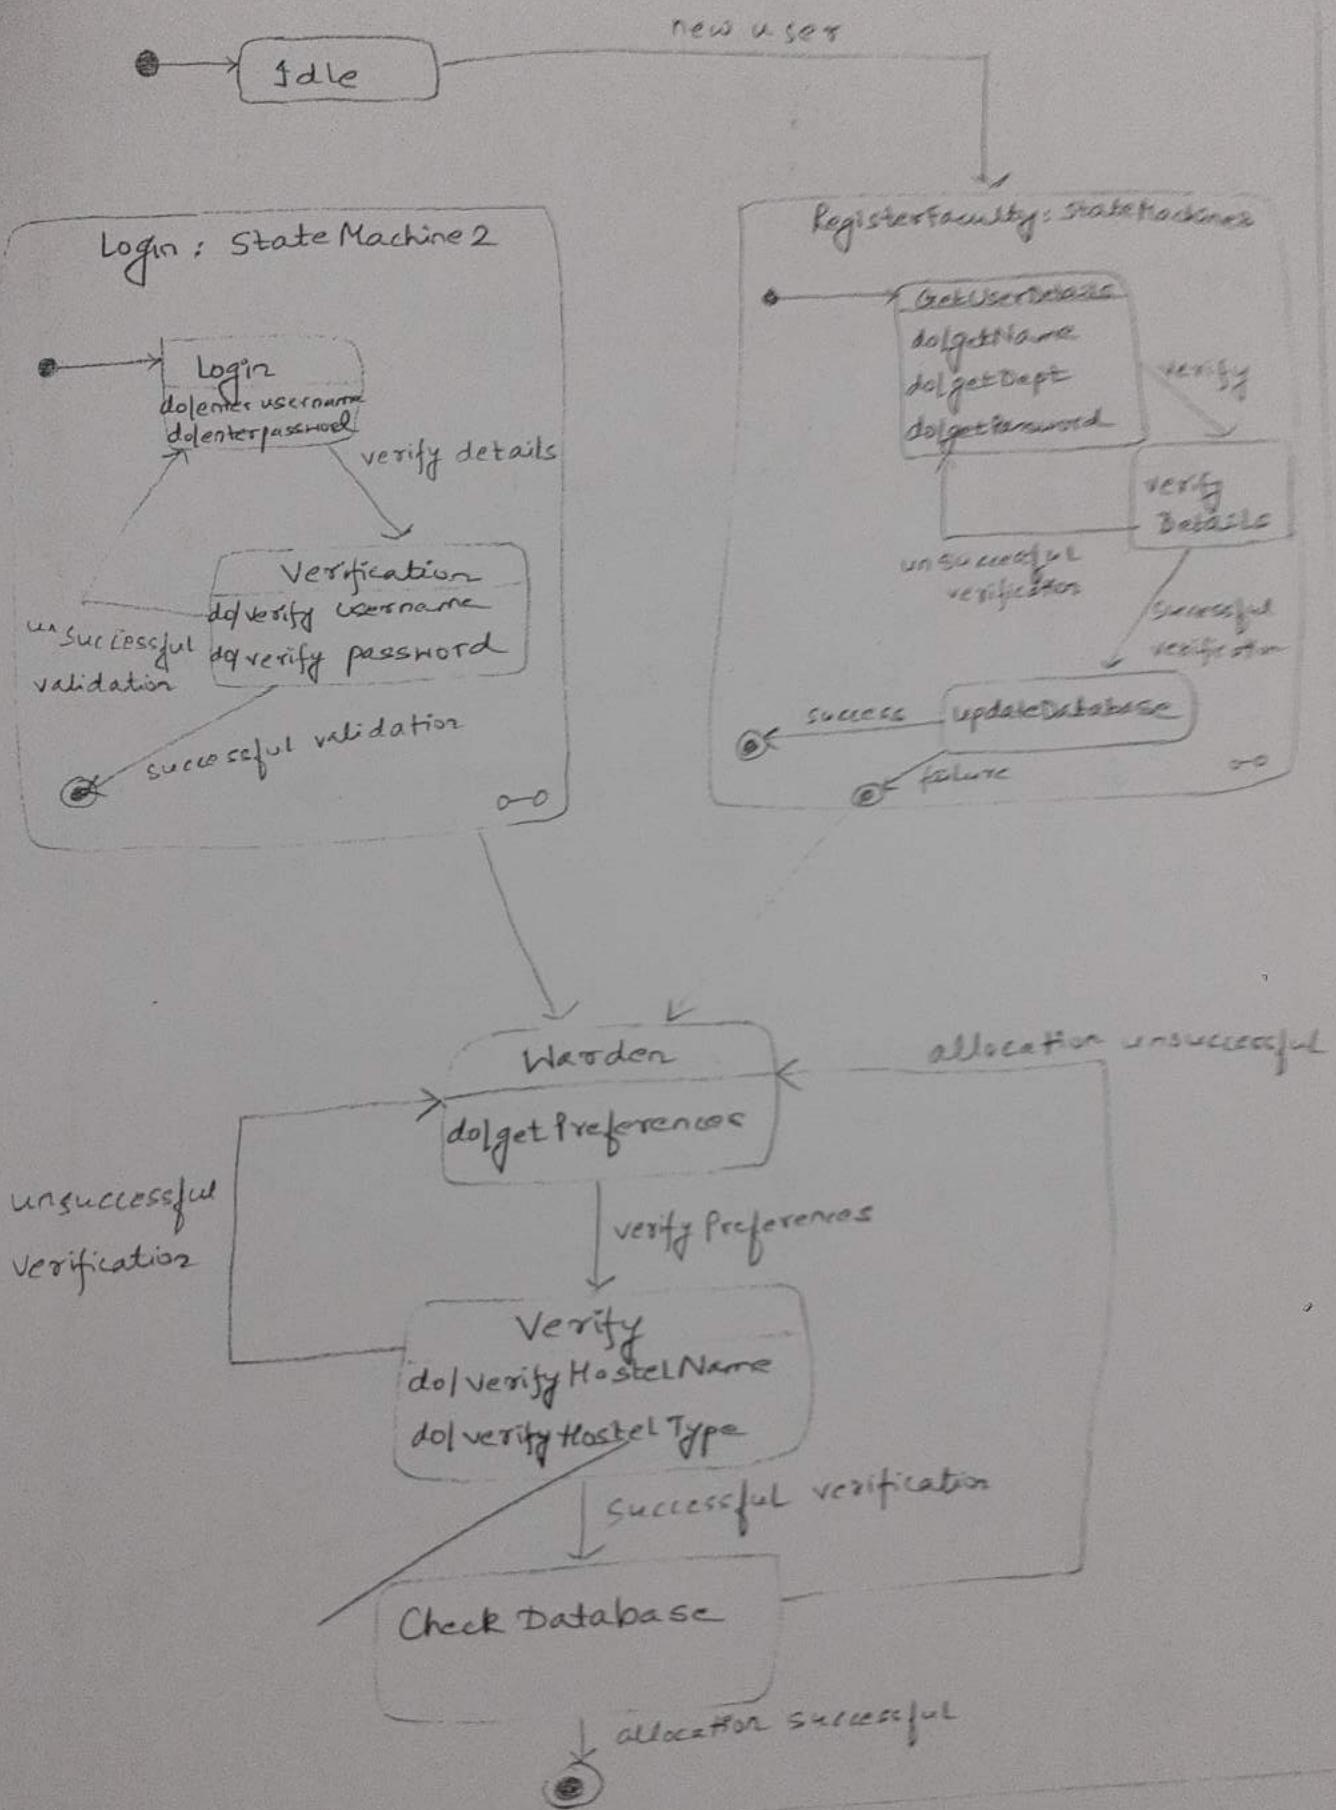

- Admin can login using credentials provided to him.
- Admin can allot hostel rooms to students.
- Students can login using the credential provided and can provide feedback about the hostel staff.
- Admin can review the feedback provided by the students.
- Admin can appoint staff.
- Students can provide message feedback.
- Mess manager can update the mess list.
- Admin can assign work to staff members.
- The system should be easy to handle and maintain.
- The system should give expected performance results.
- The response time of the system should be small.

Problem Statement:

To develop a software that can maintain an optimal stock level, track goods during transport between locations, receive new items, manage warehouse processes such as picking, packing and shipping, preventing product spoilage and ensuring that the products are never out of stock, thereby helping in the growth of business in an efficient way.

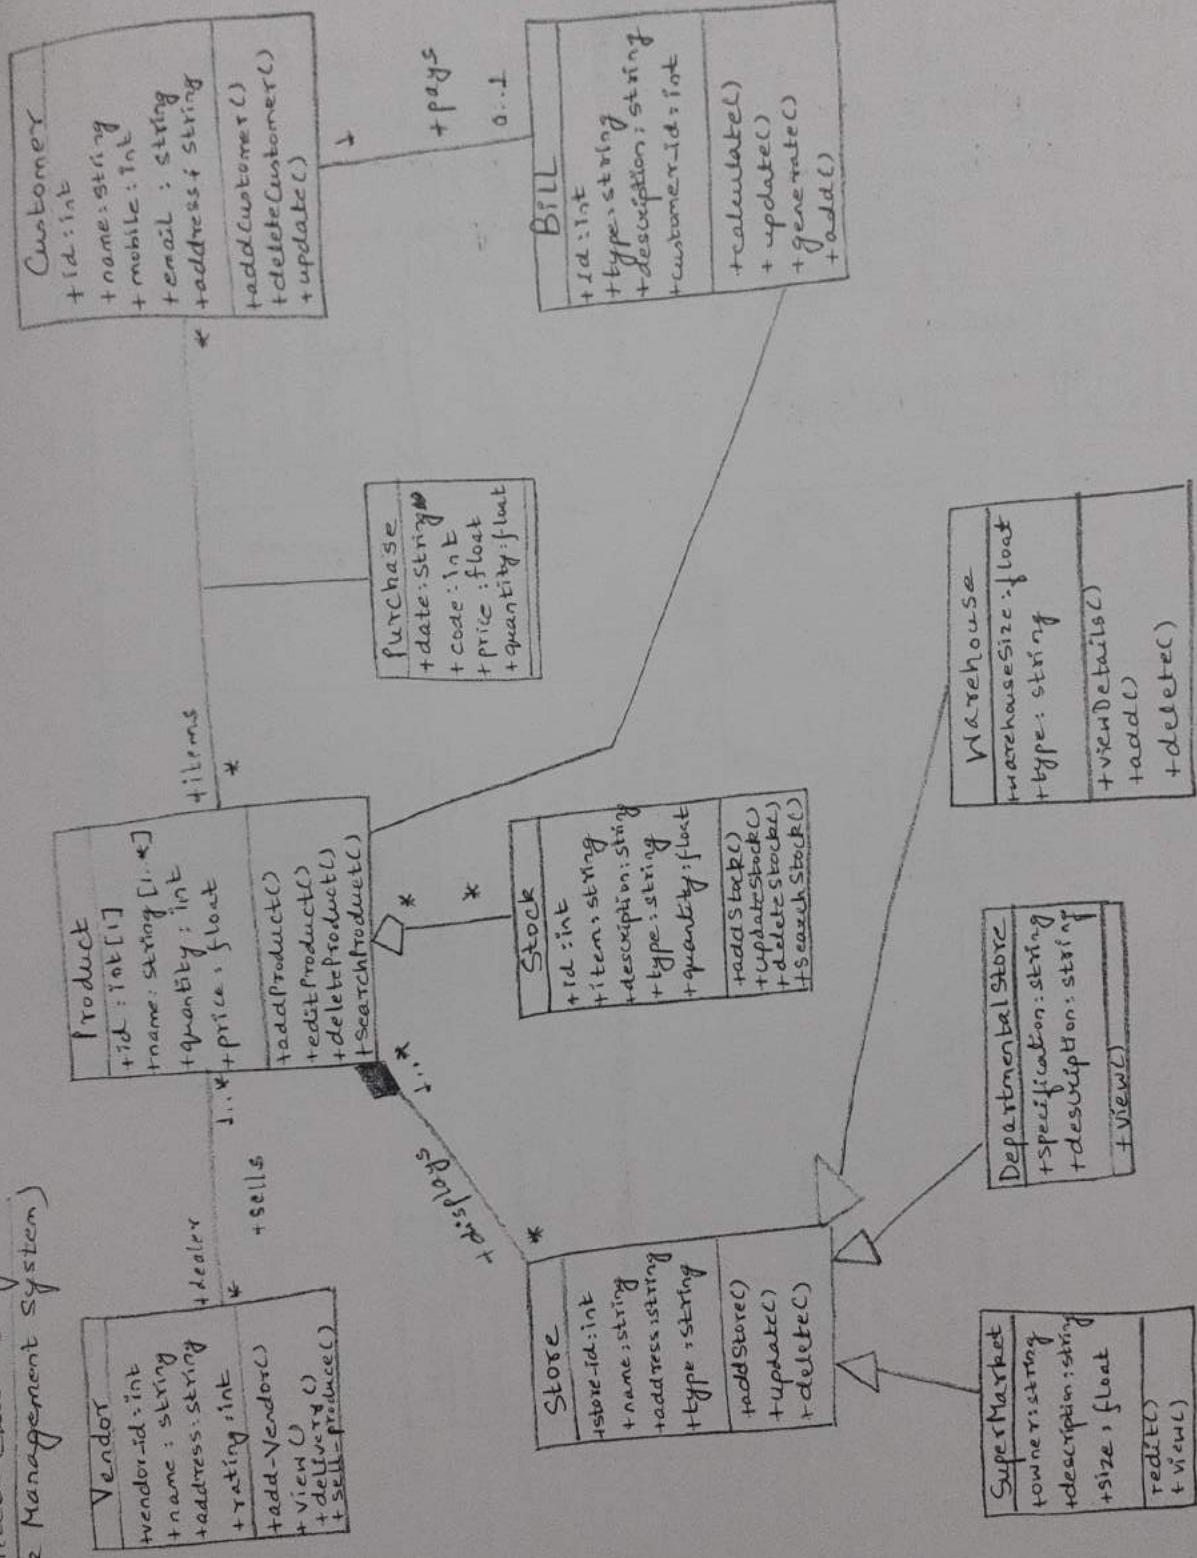

Software Requirements Specification (SRS):

- The Stock Maintenance System will allow the employees to record information of the items available in the store and generate reports based on the total amount of sales. It also allows them to enter details related to sales, purchase order, change employee preferences and create reports.
- The stock of the products is maintained separately. It deals with information about details of the product, such as name of product, ID generated, quantity, cost, etc. This information is retrieved during sales and purchase of the product.
- The customer can login, fill his/her details, can view the availability and price of the required items. Then, the customer can place an order and purchase one or more products on any day, which will have a code price and, quantity.
- The customer will have to pay the bill for the products purchased. The bill number, type description and name of the customer paying the bill is maintained.
- Employee maintains information of the sale of the item. He can add items at the right time and update the database.

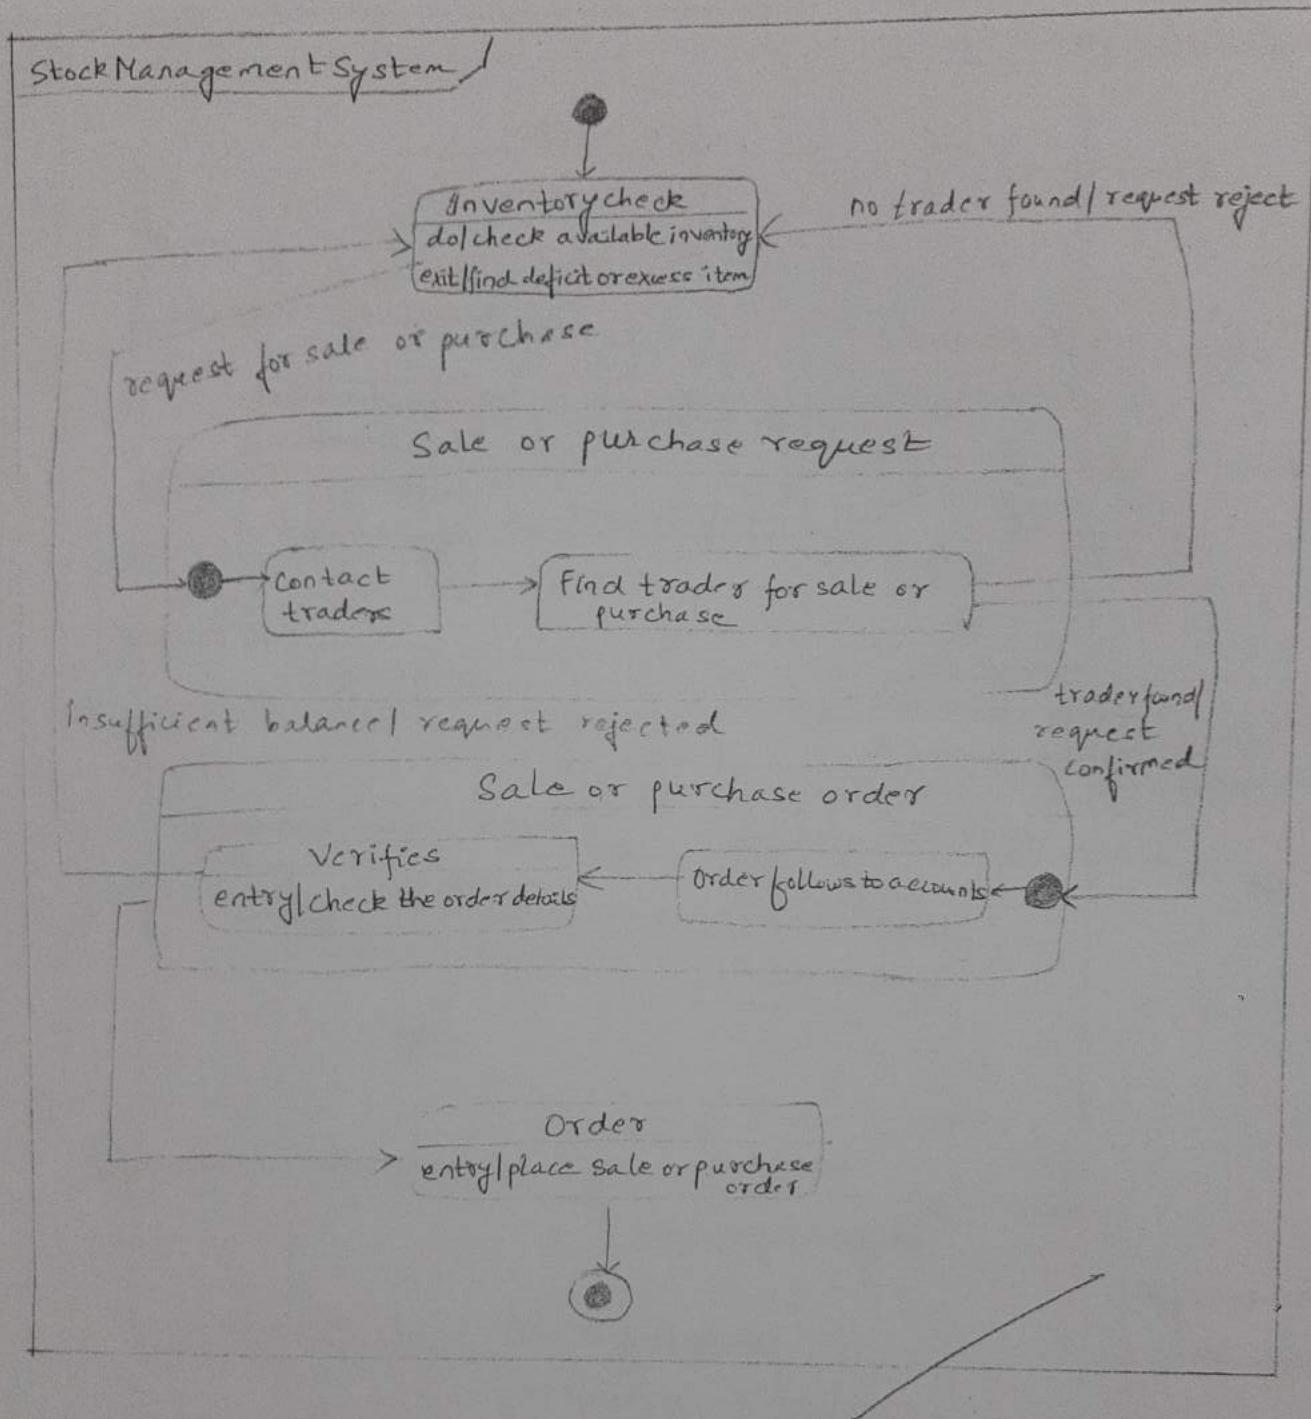

Vendor can login and view customers details and orders. He deals with information about the details of suppliers giving product to organisation. Vendor consists of details like vendor name, address, email id, etc. This information is retrieved when a purchase is done.

- Products are displayed in stores across the world. All the information related to store are used to locate any product. Stores can be of many types having different store id, name, address. Some of them are departmental stores, super markets, malls, warehouses, etc.

#### 4. Coffee Vending Machine

##### Problem Statement:

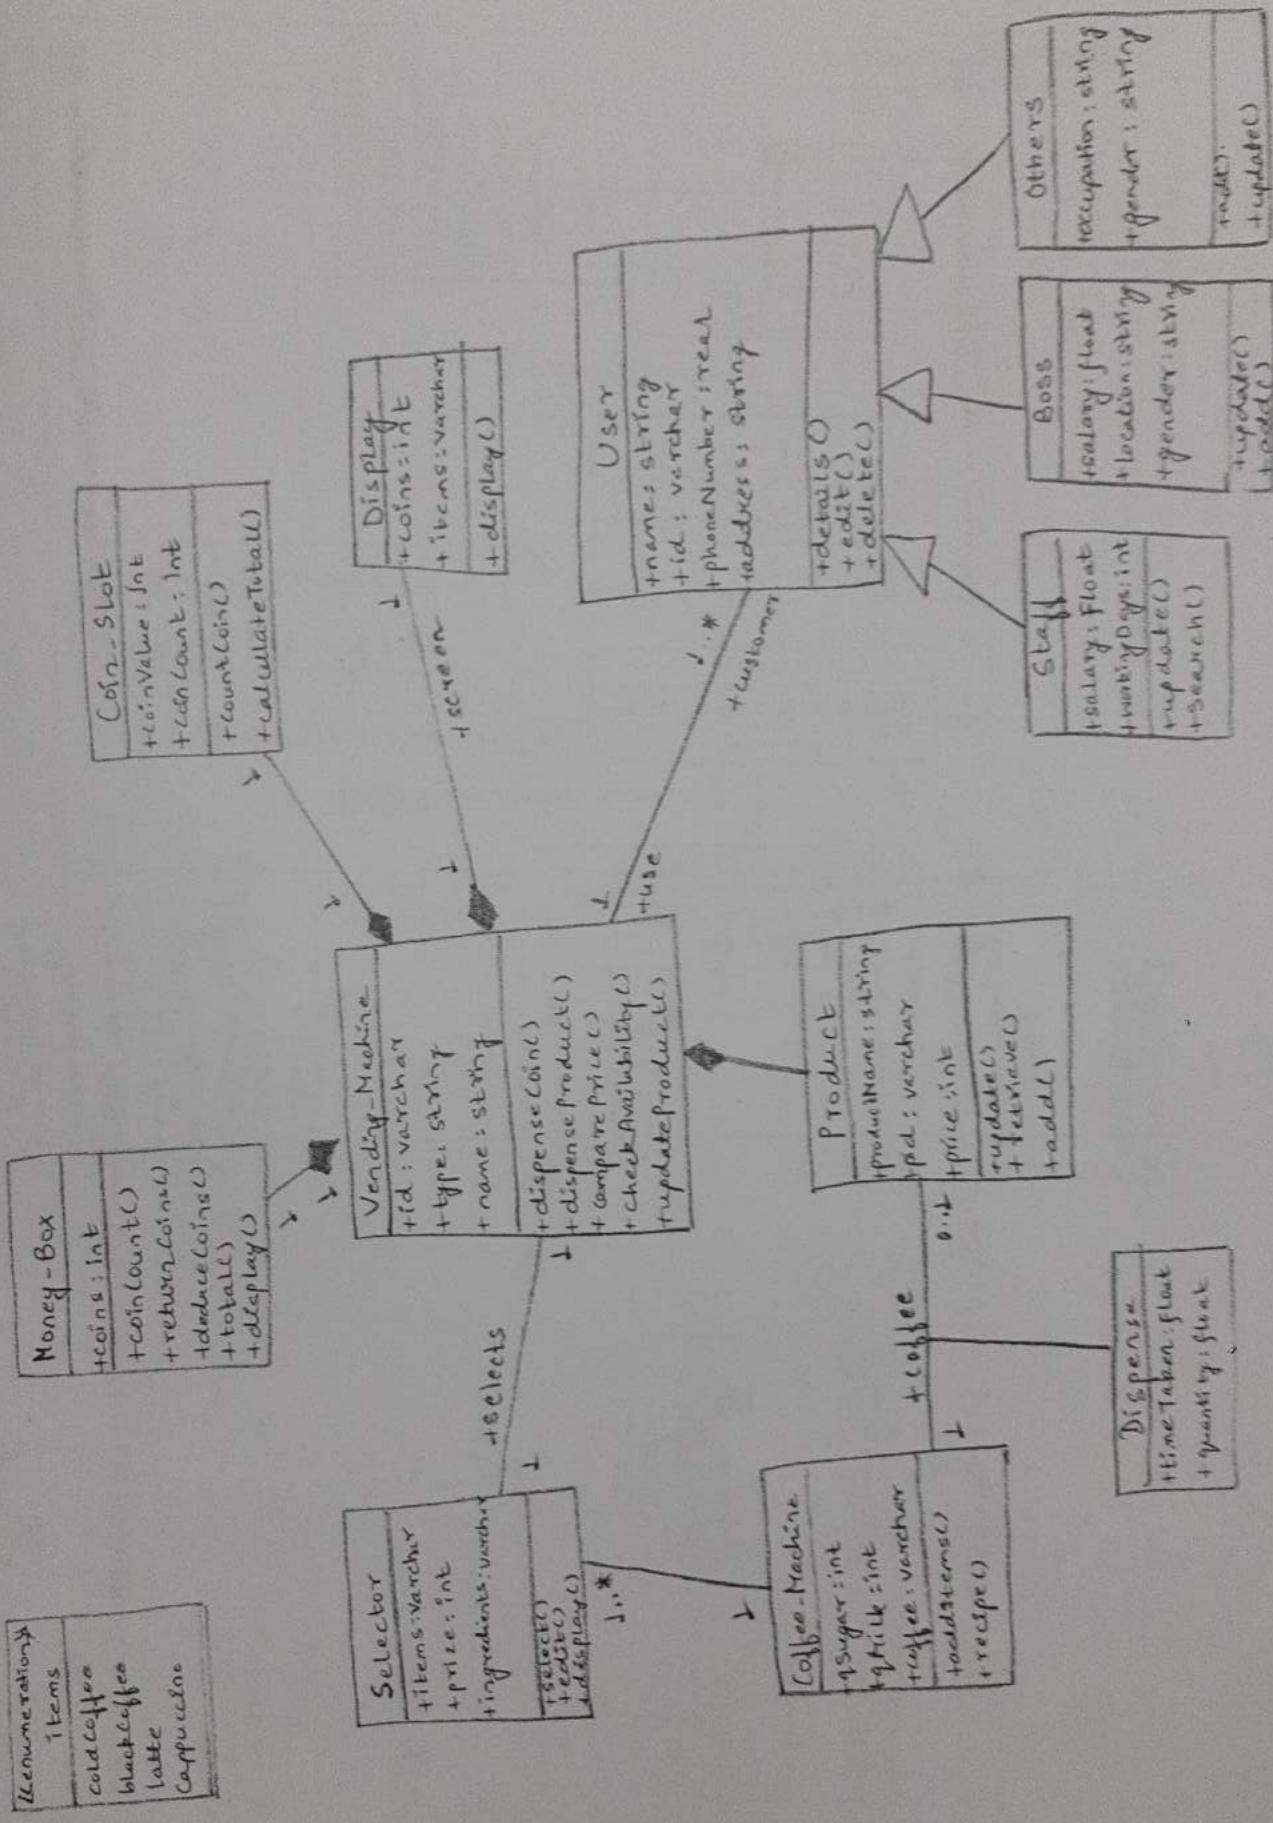

To develop a software that is convenient in places like offices, gatherings, etc where it allows different people such as employees, clients and customers to get what they need in a time and cost-saving manner, thereby saving both gas and time by avoiding a trip to the nearest coffee cafe.

##### Software Requirements Specification (SRS):

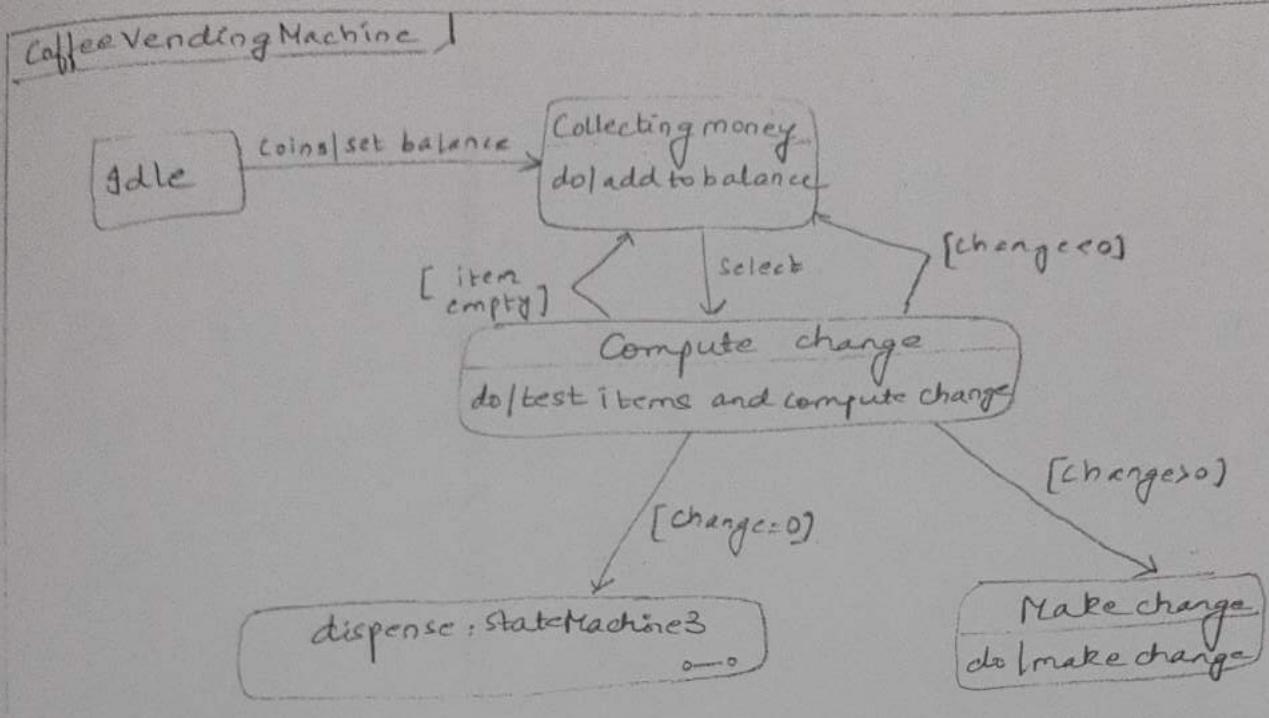

- The coffee vending machine should display all the available flavours and types of coffee and other beverages.
- The user should be able to enter their flavours of choice, without any inconvenience.
- The machine should have money box, coin slot, display screen and products, i.e. coffee.
- The user on selecting a coffee, the machine must be able to dispense the selected coffee to the user.
- There must be buttons like start, pause, coffee, tea, milk, etc. for the user to interact with the system.
- The user shall get an empty cup placed right below the filter. The user shall then be able to choose his preferred beverage from the list of options.
- The user can quit the dispense of any beverage at any time during the dispensing.
- The dispenser should accept cash, card or UPI as mode of payment.
- Once payment has been done, the system should dispense the user's choice of selected beverage into the cup, then refresh its display to show the choices again. Machine shouldn't dispense when there

- is no cup placed.
- Machine should not ask for next customer's choice until current customer's dispensing is done.
  - Machine should keep a check on the stock of commodities available and display only the ones that are available to the customer. It should send an abort to the admin if the ingredients are out of stock.
  - The admin should be able to restock commodities which are empty or in shortage.

## 6. Railway Reservation System

### Problem statement:

To develop a software that facilitates the passengers to enquire about the trains available on the basis of source and destination, booking and cancellation of tickets, enquiry about the status of the booked tickets, etc. without any need of standing in long queues and hence saving time.

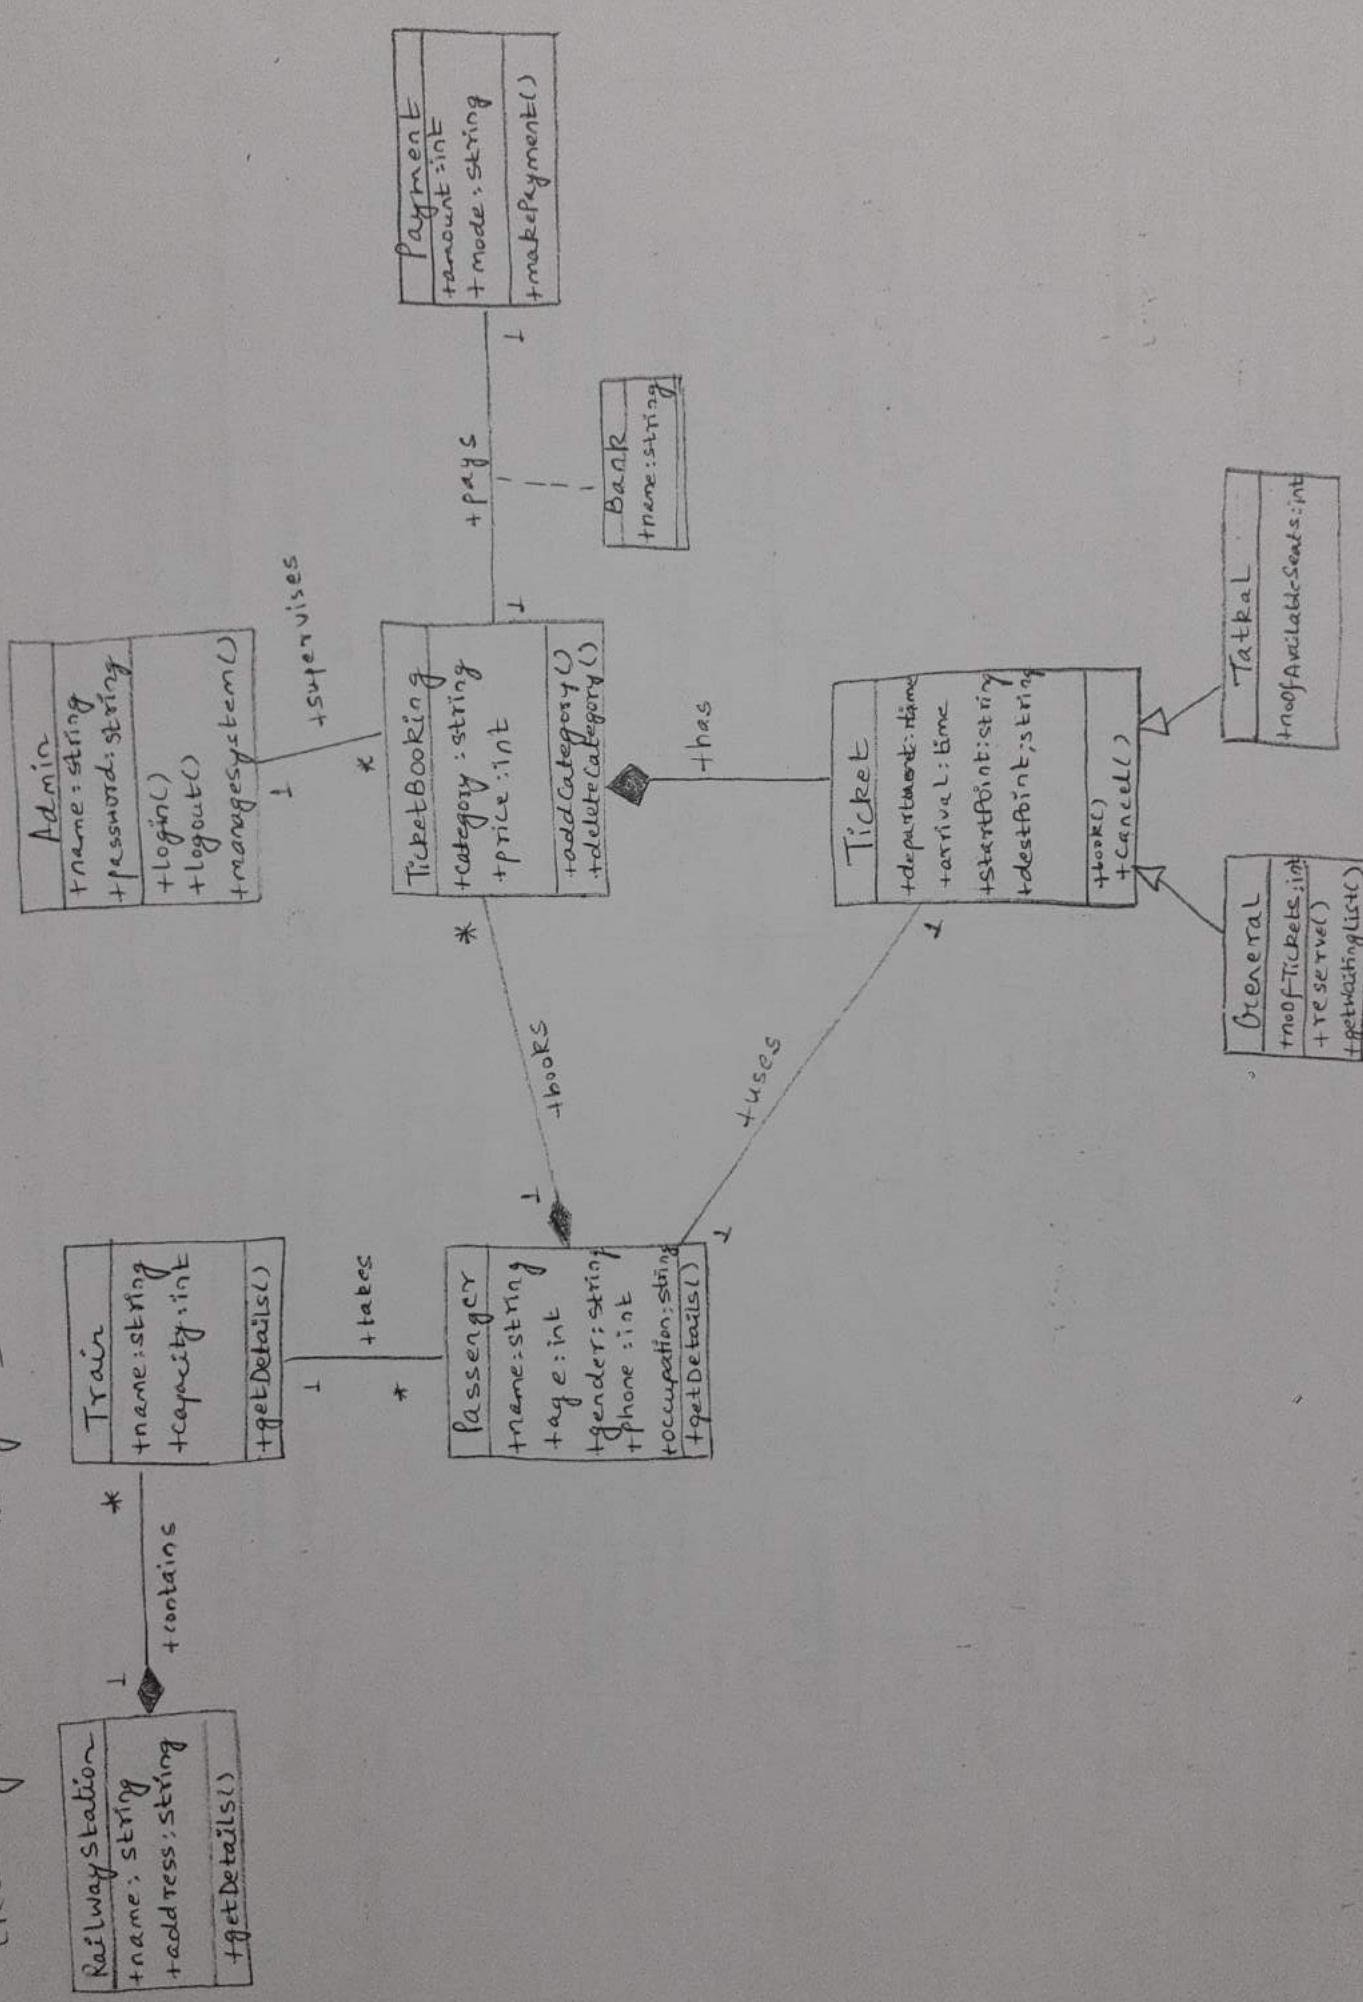

### Software Requirements Specification (SRS):

- Developing a user-friendly Railway Reservation System in order to enable passengers to book tickets online and make payment online as well.
- The system provides information to the users relating to the train timing details, availability of the trains based on the source and destination selected, reservation, billing and cancellation on various types of reservation namely, Confirm Reservation for seat, Reservation against cancellation, Waiting list Reservation, Online Reservation and Tatkal Reservation.
- The system enables advance booking in any class, against general and ladies quota, payment of fare in full, for adults and children, a maximum of six berths at a time for a journey between any two stations served by a train.
- The system provides details about timetable, train fares, current status of reservation position, train available between a pair of stations along with the accommodation that is available for a train or for a date.
- Each user should have a user id and password. Record of the users of the system should be kept in the log file. Provision should be made for a full backup.

- The customer should be able to view any trains available at any day, cost and number of tickets available.
- Tickets can be booked in two ways, i-ticket or by e-ticket booking.
- The customer can book a ticket if they are available. The customer could search for the availability of tickets, then if the tickets are available, he/she can book by filling up the form that needs customer initial details.
- i-tickets can be booked online or tickets can be booked in person at the counter.
- e-tickets are booked online and the tickets can be shown through online or a print out is needed.
- Cancellation of the ticket is possible using a form given at the reservation office.
- The system can be used to display the entire details of the trains. The information is saved and corresponding updation takes place in the database.

## 7. Graphics Editor

Problem statement:

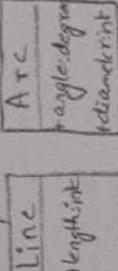

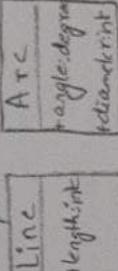

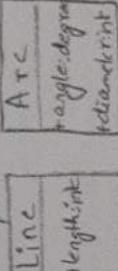

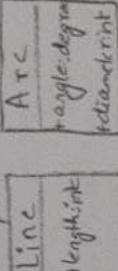

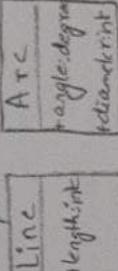

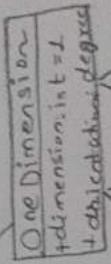

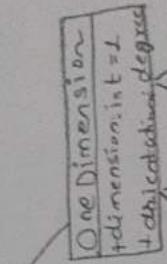

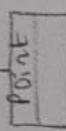

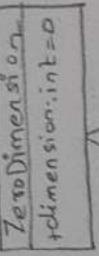

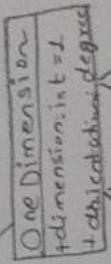

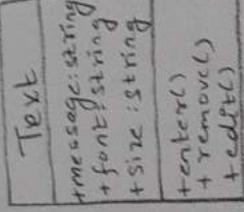

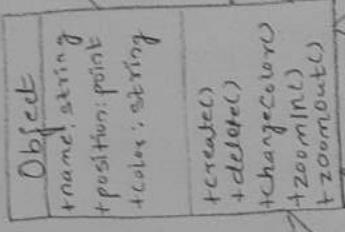

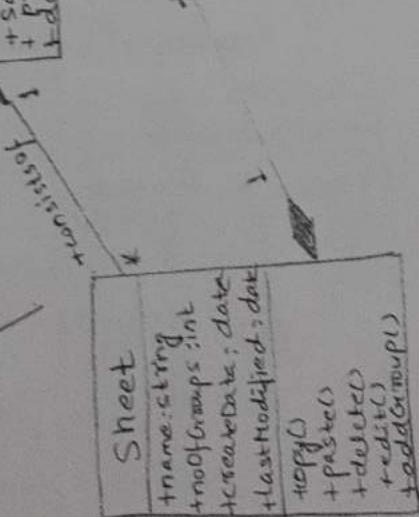

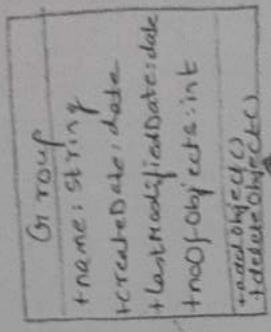

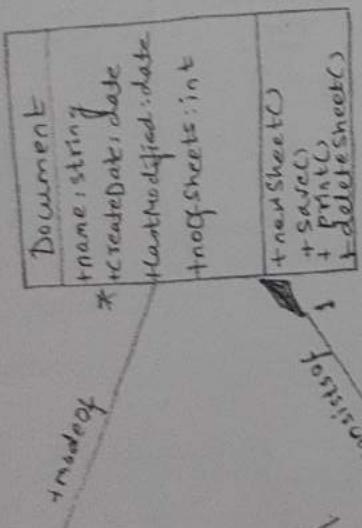

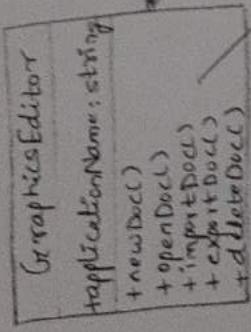

To develop a software that allows a user to edit and manipulate graphical images through a variety of methods with the intention of maintaining uniqueness and creativity of a user in each design.

Software Requirements Specification (SRS):

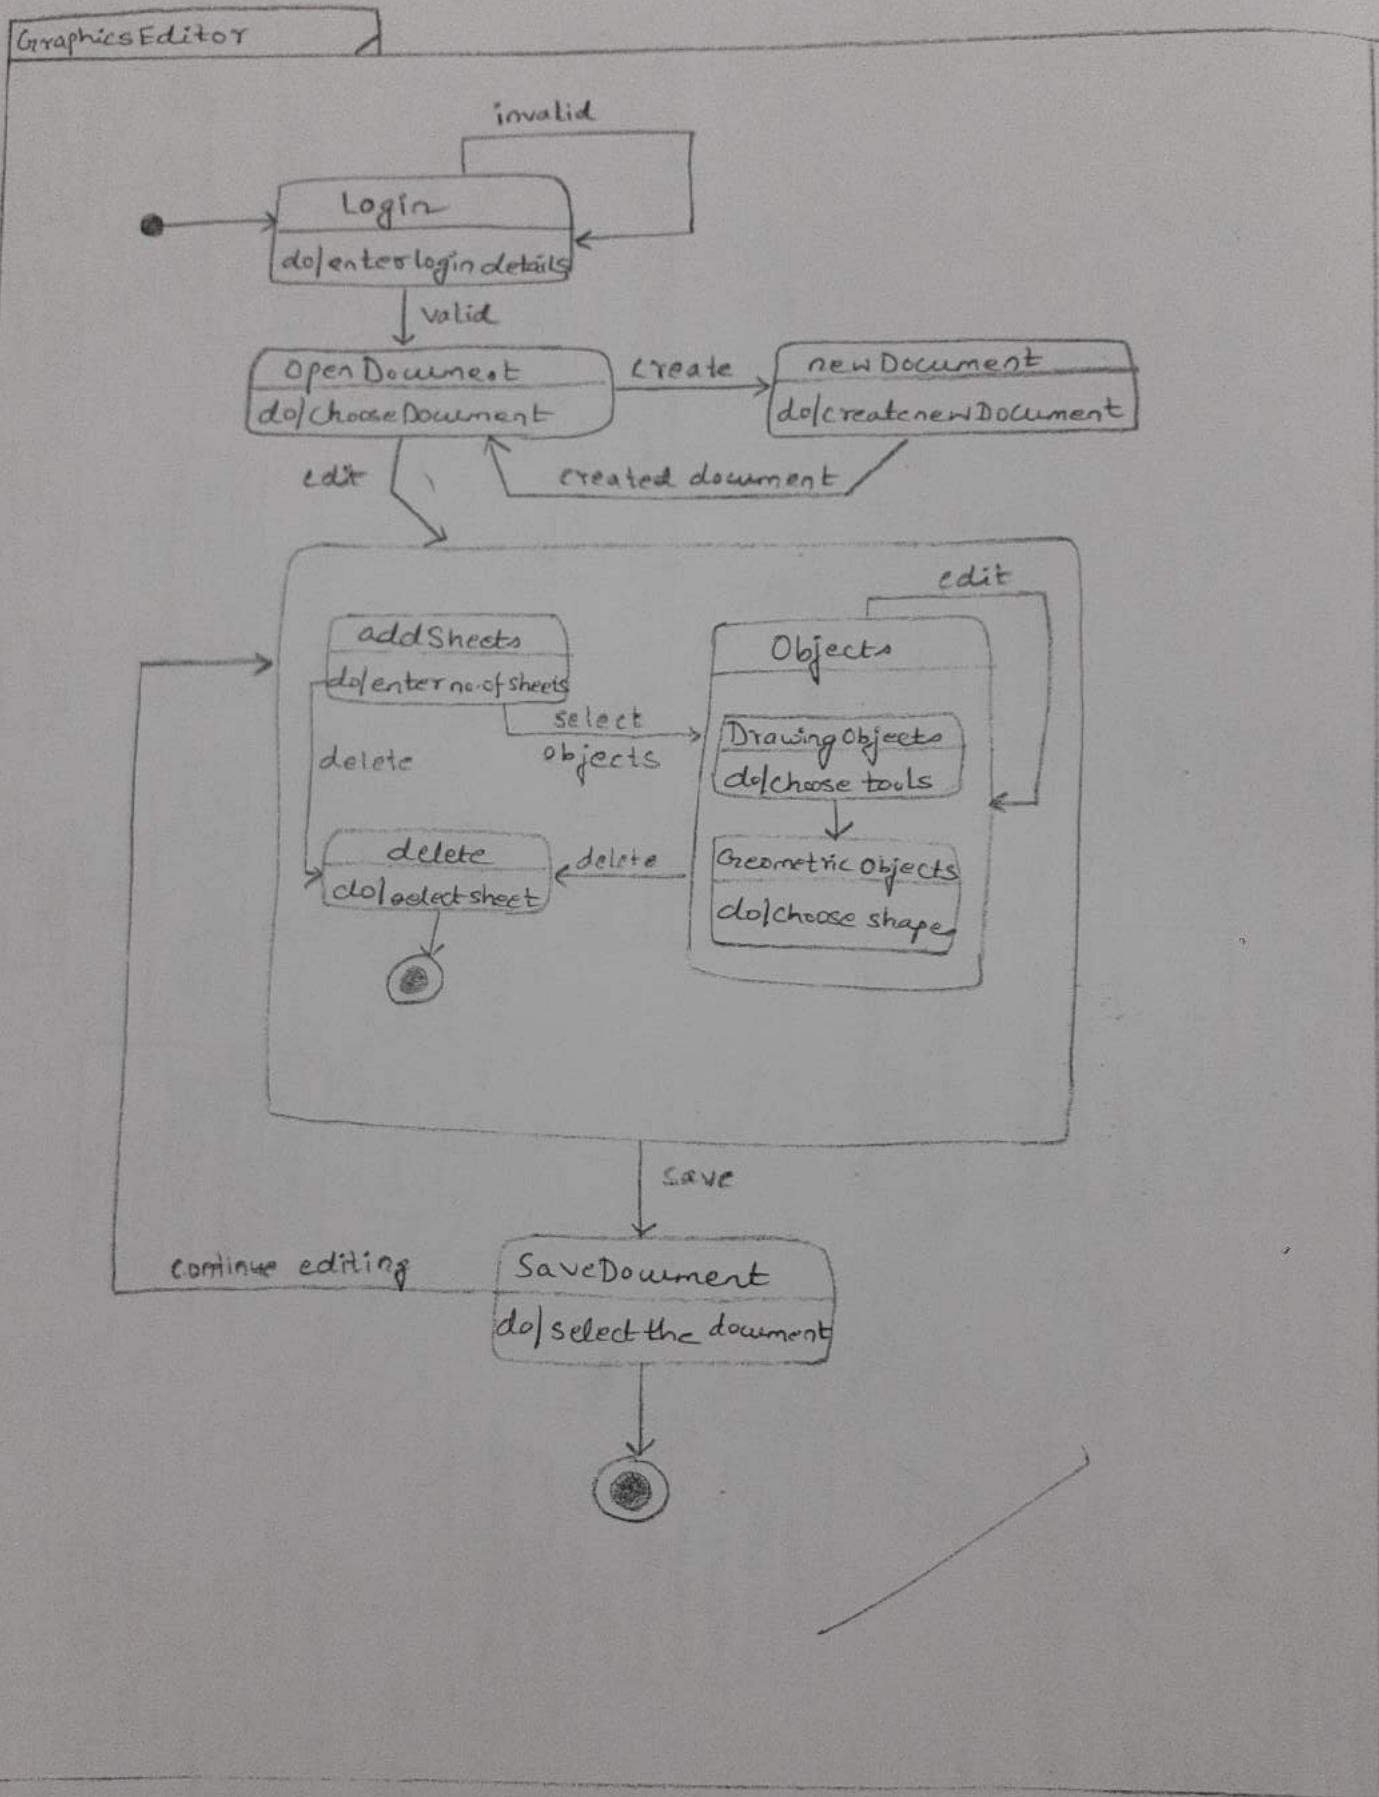

- The graphics editor provides an Application Programmer's Interface that enables a programmer to develop their own graphical model editor for a specific type of model. It consists of a graphical document editor which can be used to create new documents, delete a document, update or view a document.
- It contains the toolbox that contains tools like : Line, Circle, Rectangle, Arc, Text, Draw, Eraser, Color box.
- A document is made up of many sheets including these tools inside them. The sheets will be having multiple number of drawing objects, which can be created, grouped or formatted.
- A standard toolbar with options for New, Open, Save, toolbox and Text Toolbox.
- The user can add or remove any changes made to the sheets using the color box supplied.
- The toolbar and editors should be easy for the user to handle.
- One integrated view is provided to the users for toolbar, color box, menu and graphic screen.
- The user will have the ability to group several drawings into one, i.e. complex drawing) or attach any photos from one to the other.
